

ENVIRONMENTAL LABEL CRITERIA FOR BED MATTRESSES

ARTICLE 1- These criteria are regulated within the scope of Environmental Label Regulation dated 19.10.2018 and numbered 30570.

ARTICLE 2- The product group 'bed mattresses' shall comprise products consisting of a cloth cover that is filled with materials and that can be placed on an existing supporting bed structure or designed for freestanding in order to provide a surface to sleep or rest upon for indoor use.

The product group shall not include wooden and upholstered bed bases, inflatable mattresses and water mattresses, as well as mattresses classified under "Medical Device Regulation" dated 02.06.2021 and numbered 31499.

ARTICLE 3- The assessment and verification requirements regarding the environmental label criteria determined for the bed mattresses product group will be valid for 5 (five) years. The criteria may be updated when deemed necessary by the Environmental Labeling Board within five years. The criteria's validity period can be extended with the Environmental Labeling Board's approval.

DEFINITIONS

For the purpose of application of this criteria, the following definitions shall apply:

Cot mattress: A mattress with the length shorter than 1 400 mm;

Eliminable substance: A substance that shows 80 % degradation of dissolved organic carbon within 28 days using one of the following test methods: OECD 303A/B, TS EN ISO 11733;

Inherently biodegradable substance: A substance that shows 70 % degradation of dissolved organic carbon within 28 days or 60 % of theoretical maximum oxygen depletion or carbon dioxide generation within 28 days using one of the following test methods: TS EN ISO 14593, OECD 302 A, TS EN ISO 9887, OECD 302 B, TS EN ISO 9888, OECD 302 C;

Readily biodegradable substance: A substance that shows 70 % degradation of dissolved organic carbon within 28 days or 60 % of theoretical maximum oxygen depletion or carbon dioxide generation within 28 days using one of the following test methods: OECD 301 A, TS EN ISO 7827, OECD 301 B, TS EN ISO 9439, OECD 301 C, OECD 301 D, TS EN ISO 10708, OECD 301 E, OECD 301 F, TS EN ISO 9408;

Semi-volatile organic compound (SVOC): Any organic compound eluting in a gas chromatographic (GC) column between n-hexadecane (excluded) and n-docosane (included) and

with a boiling point approximately higher than 287 °C, where the measurement is carried out using a capillary column coated with 5 % phenyl/95 % methyl-polysiloxane;

Volatile organic compound (VOC): Any organic compound eluting in a gas chromatographic column between, and including, n-hexane and n-hexadecane with a boiling point in the range of approximately 68 °C to 287 °C, where the measurement is carried out using a capillary column coated with 5 % phenyl/95 % methylpolysiloxane.

CRITERIA

The criteria for granting the Environmental Label to the bed mattress product group are as follows:

1. Latex foam
2. Polyurethane (PUR) foam
3. Wire and springs
4. Coconut fibres
5. Textiles (fabrics and fibres used as a mattress cover and/or filling materials)
6. Glues and adhesives
7. Flame retardants
8. Biocides
9. Plasticizers
10. Excluded or limited substances and mixtures
11. Emission of specified volatile organic compounds (VOCs, SVOCs) from the mattress
12. Technical performance
13. Design for disassembly and recovery of materials
14. Information appearing on the Turkish Environmental Label
15. Additional information to consumers

ASSESSMENT AND VERIFICATION REQUIREMENTS

The specific assessment and verification requirements are indicated within each criterion

Where the applicant is required to provide declarations, documentation, analyses, test reports, or other evidence to show compliance with the criteria, these may originate from the applicant and/or his supplier(s) and/or their suppliers, etc., as appropriate.

The Ministry recognizes the tests performed by laboratories accredited by an accreditation body that is a party to the International Laboratory Accreditation Association (ILAC) Mutual

Recognition Agreement (MRA) according to TS EN ISO/IEC 17025. (TÜRKAK accredited organizations can be accessed at <https://secure.turkak.org.tr/kapsam/search>.) If it is proved that there is no accredited institution for the test technique, which is mandatory within the scope of assessment and verification criteria, TS EN ISO/IEC 17025 accreditation criterion is not required.

When generating data for the classification of substances or mixtures, the second 28848 published in the Official Gazette dated 11.12.2013 of substances and mixtures physicochemical, toxicological, and ecotoxicological test methods to be applied in determining the properties on the regulations' provisions or procedures in accordance with internationally recognized scientific principles or internationally validated methods shall be taken into consideration.

Where appropriate, test methods other than those indicated for each criterion may be used if the Ministry assessing the application accepts their equivalence.

Where appropriate, the Ministry may require supporting documentation and may carry out independent verifications and site visits.

As a pre-requisite, the product must meet all respective legal requirements of the country in which the product is intended to be placed on the market. The applicant shall declare the product's compliance with this requirement.

CRITERIA AND REQUIREMENTS

CRITERION 1. Latex Foam

The following requirements need to be met only if latex foam contributes to more than 5 % of the total weight of the mattress.

Criterion 1.1 Restricted Substances

The concentrations in the latex foam of the substances listed below shall not exceed the following values.

Substance/Group of Substances	Substance/Group of Substances	Limit Value (ppm)	Assessment and verification conditions
Chlorophenols	Mono ve di-chlorinated phenols (salts and esters)	1	A
	Other chlorophenols	0,1	A
Heavy metal	As (Arsenic)	0,5	B
	Cd (Cadmium)	0,1	B
	Co (Cobalt)	0,5	B
	Cr (Chromium)	1	B
	Cu (Copper)	2	B
	Hg (Mercury)	0,02	B
	Ni (Nickel)	1	B
	Pb (Lead)	0,5	B
	Sb (Antimony)	0,5	B

Substance/Group of Substances	Substance/Group of Substances	Limit Value (ppm)	Assessment and verification conditions
Pesticides (*)	Aldrin	0,04	C
	o,p-DDE	0,04	C
	p,p-DDE	0,04	C
	o,p-DDD	0,04	C
	p,p-DDD	0,04	C
	o,p-DDT	0,04	C
	p,p-DDT	0,04	C
	Diazinone	0,04	C
	Dikchlorfenthion	0,04	C
	Dichlorvos	0,04	C
	Dieldrin	0,04	C
	Endrin	0,04	C
	Heptachlor	0,04	C
	Heptachlorepoxyde	0,04	C
	Hexachlorobenzene	0,04	C
	Hexachlorocyclohexane	0,04	C
	α - Hexachlorocyclohexane	0,04	C
	β - Hexachlorocyclohexane	0,04	C
	γ - Hexachlorocyclohexane	0,04	C
	δ - Hexachlorocyclohexane	0,04	C
	Malathion	0,04	C
	Methoxichlor	0,04	C
	Mirex	0,04	C
	Parathion-ethyl	0,04	C
	Parathion-methyl	0,04	C
Other specific substances that are restricted	Butadiene	1	D

* Only for foams composed of natural latex for at least 20 % by weight.

Assessment and Verification:

- A.** For chlorophenols the applicant shall provide a report presenting the results of the following test procedure.

5 g of the sample shall be milled and chlorophenols shall be extracted in the form of phenol (pentachlorophenols, PCP), sodium salt (sodium pyrophosphate, SPP) or esters. The extracts shall be analysed by means of GC. Detection shall be made with a mass spectrometer or electron capture detector (ECD).

- B.** For heavy metals, the applicant shall provide a report presenting the results of the following test procedure.

Milled sample material is eluted in accordance with DIN 38414-S4 or equivalent in a ratio of 1:10. The resultant filtrate shall be passed through a 0,45 μ m membrane filter (if necessary by pressure filtration). The solution obtained shall be examined for the content of heavy metals by inductively coupled plasma optical emission spectrometry (ICP-OES), also known as

inductively coupled plasma atomic emission spectrometry (ICP-AES), or by atomic absorption spectrometry using a hydride or cold vapour process.

- C.** For pesticides, the applicant shall provide a report presenting the results of the following test procedure.

2 g of sample is extracted in an ultrasonic bath with a hexane/dichloromethane mixture (85/15). The extract is cleaned up by acetonitrile agitation or by adsorption chromatography over florisil. Measurement and quantification are determined by GC-ECD or by GC-MS. The testing on pesticides is requested for latex foams with a content of at least 20 % natural latex.

- D.** For butadiene, the applicant shall provide a report presenting the results of the following test procedure.

Following milling and weighing of the latex foam, headspace sampling shall be performed. Butadiene content shall be determined by GC with detection by flame ionization.

Criterion 1. Dyes

Should dyes be used, criterion 5.5 shall be respected. Assessment and verification: the applicant shall provide either a declaration of non-use of dyes from the manufacturer of the foam or, in case of use, a declaration of compliance with this criterion, together with supporting documentation.

CRITERION 2. Polyurethane (PUR) Foam

The following requirements need to be met only if PUR foam contributes to more than 5 % of the total weight of the mattress.

Criterion 2.1 Restricted Substances

The concentrations in the PUR foam of the substances listed below shall not exceed the following values.

Substance/Group of Substances	Substance/Group of Substances	Limit Value	Assessment and verification conditions
Biocides	Substances restricted according to criterion 8.1	Not added intentionally	A
Heavy metals	As (Arsenic)	0,2 ppm	B
	Cd (Cadmium)	0,1 ppm	B
	Co (Cobalt)	0,5 ppm	B
	Cr (Chromium)	1,0 ppm	B
	Cr VI (Chromium VI)	0,01 ppm	B
	Cu (Copper)	2,0 ppm	B
	Hg (Mercury)	0,02 ppm	B
	Ni (Nickel)	1,0 ppm	B
	Pb (Lead)	0,2 ppm	B
	Sb (Antimony)	0,5 ppm	B

Substance/Group of Substances	Substance/Group of Substances	Limit Value	Assessment and verification conditions
	Se (Selenium)	0,5 ppm	B
Plasticizers	Di-iso-nonylphthalate (DINP, 28553-12-0)	0,01 % w/w (sum)	C
	Di-n-octylphthalate (DNOP, 117-84-0)		
	Di (2-ethylhexyl)-phthalate (DEHP, 117-81-7)		
	Di-iso-decylphthalate (DIDP, 26761-40-0)		
	Butylbenzylphthalate (BBP, 85-68-7)		
	Dibutylphthalate (DBP, 84-74-2)		
	Phthalates	Not added intentionally	A
Toluenediamine and Methylenedianillin	2,4 TDA	5,0 ppm	D
	4,4'-Diaminodiphenylmethane	5,0 ppm	D
	(4,4'-MDA, 101-77-9)		
Tinorganic substances	Tributyltin (TBT)	50 ppb	E
	Dibutyltin (DBT)	100 ppb	E
	Monobutyltin (MBT)	100 ppb	E
	Tetrabutyltin (TeBT)	—	—
	Monooctyltin (MOT)	—	—
	Dioctyltin (DOT)	—	—
	Tricyclohexyltin (TcyT)	—	—
	Triphenyltin (TPhT)	—	—
	Sum	500 ppb	E
Other specific substances that are restricted	Chlorinated or brominated dioxines or furans	Not added intentionally	A
	Chlorinated hydrocarbons (1,1,2,2-Tetrachloroethane, Pentachloroethane, 1,1,2-Trichloroethane, 1,1-Dichloroethylene)	Not added intentionally	A
	Chlorinated phenols (PCP, TeCP, 87-86-5)	Not added intentionally	A
	Hexachlorocyclohexane (58-89-9)	Not added intentionally	A
	Monomethyldibromo-Diphenylmethane (99688-47-8)	Not added intentionally	A
	Monomethyldichloro-Diphenylmethane (81161-70-8)	Not added intentionally	A
	Nitrites	Not added intentionally	A
	Polybrominated Biphenyls (PBB, 59536-65-1)	Not added intentionally	A
	Pentabromodiphenyl Ether (PeBDE, 32534-81-9)	Not added intentionally	A

Substance/Group of Substances	Substance/Group of Substances	Limit Value	Assessment and verification conditions
	Octabromodiphenyl Ether (OBDE, 32536-52-0)	Not added intentionally	A
	Polychlorinated Biphenyls (PCB, 1336-36-3)	Not added intentionally	A
	Polychlorinated Terphenyls (PCT, 61788-33-8)	Not added intentionally	A
	Tris(2,3-dibromopropyl) phosphate (TRIS, 126-72-7)	Not added intentionally	A
	Trimethylphosphate (512-56-1)	Not added intentionally	A
	Tris-(aziridinyl)-phosphin oxide (TEPA, 545-55-1)	Not added intentionally	A
	Tris(2-chloroethyl)-phosphate (TCEP, 115-96-8)	Not added intentionally	A
	Dimethyl methylphosphonate (DMMP, 756-79-6)	Not added intentionally	A

Assessment and Verification:

- A.** For biocides, phthalates and other specific substances that are restricted the applicant shall provide a declaration supported by declarations from manufacturers of the foam confirming that the listed substances have not been added intentionally to the foam formulation.
- B.** For heavy metals the applicant shall provide a report presenting the results of the following test procedure. Milled sample material is eluted in accordance with DIN 38414-S4 or equivalent in a ratio of 1:10. The resultant filtrate shall be passed through a 0,45 µm membrane filter (if necessary by pressure filtration). The solution obtained shall be examined for the content of heavy metals by atomic emission spectrometry with inductively coupled plasma (ICP-AES or ICP-OES) or by atomic absorption spectrometry using a hydride or cold vapour process.
- C.** For the total amount of plasticizers the applicant shall provide a report presenting the results of the following test procedure. The sample shall be a composite of 6 pieces to be taken from beneath each sample's face (to a maximum of 2 cm from the surface). Extraction shall be performed with dichloromethane using a validated method and followed by analysis with gas chromatography–mass spectrometry (GC/MS) or high-performance liquid chromatography (HPLC/UV).
- D.** For TDA and MDA the applicant shall provide a report presenting the results of the following test procedure. The sample shall be a composite of 6 pieces to be taken from beneath each sample's face (to a maximum of 2 cm from the surface). Extraction shall be performed with 1 % aqueous acetic acid solution. Four repeat extractions of the same foam sample shall be performed maintaining the sample weight-to-volume ratio of 1:5 in each case. The extracts shall be combined, made up to a known volume, filtered and analysed by HPLC-UV or HPLC-

MS. If HPLC-UV is performed and interference is suspected, reanalysis with HPLC-MS shall be performed.

- E. For tinorganic substances the applicant shall provide a report presenting the results of the following test procedure. The sample shall be a composite of 6 pieces to be taken from beneath each sample face (to a maximum of 2 cm from the surface). Extraction shall be performed for 1 hour in an ultrasonic bath at room temperature. The extracting agent shall be a mixture composed of as follows: 1 750 ml methanol + 300 ml acetic acid + 250 ml buffer (pH 4,5). The buffer shall be a solution of 164 g of sodium acetate in 1 200 ml of water and 165 ml of acetic acid, to be diluted with water to a volume of 2 000 ml. After extraction, the alkyl tin species shall be derivatized by adding sodium tetraethyl borate solution in tetrahydrofuran (THF). The derivative shall be extracted with n-hexane and the sample shall be submitted to a second extraction procedure. Both hexane extracts shall be combined and further used to determine the organotin compounds by gas chromatography with mass selective detection in SIM modus.

Criterion 2.2 Dyes

Should dyes be used, criterion 5.5 shall be respected.

Assessment and Verification: The applicant shall provide either a declaration of non-use of dyes from the manufacturer of the foam or, in case of use, a declaration of compliance with this criterion, together with supporting documentation.

Criterion 2.3 Total Chlorine Content of Isocyanates

Should mixed isomers of toluene diisocyanate (TDI) be used in the production of the PUR foam, the total chlorine content of these isocyanates shall not exceed 0,07 % by weight.

Assessment and Verification: The applicant shall provide either a declaration of non-use from the manufacturer of the foam or the results of the test methods carried out in accordance with ASTM D4661-93 or equivalent.

Criterion 2.4 Total Chlorine Content of Isocyanates

Halogenated organic compounds shall not be used as blowing agents or as auxiliary blowing agents.

Assessment and Verification: The applicant shall provide a declaration of non-use from the manufacturer of the foam.

CRITERION 3. Wire and Springs

The following requirements need to be met only if wire and springs contribute to more than 5 % of the total weight of the mattress.

Criterion 3.1 Degreasing

If degreasing and/or cleaning of wire and/or springs is carried out with organic solvents, use shall be made of a closed cleaning/degreasing system.

Assessment and Verification: The applicant shall provide a corresponding declaration from the manufacturer of wire and/or springs.

Criterion 3.2 Galvanisation

The surface of springs shall not be covered with a galvanic metallic layer.

Assessment and Verification: The applicant shall provide a corresponding declaration from the manufacturer of wire and/or springs.

CRITERION 4. Coconut Fibres

The following requirement needs to be met only if coconut fibre contributes to more than 5 % of the total weight of the mattress.

Criteria for latex foam shall be considered if coconut fibre material is rubberized using latex.

Assessment and Verification: The applicant shall either provide a declaration of non-use of rubberized coconut fibres, or the test reports required in criterion 1 for latex foam.

CRITERION 5. Textiles (fabrics and fibres used as a mattress cover and/or filling materials)

(1) 11 sub-criteria of Criterion 5 (Criterion 5.1-Criterion 5.11) shall be respected for the mattress cover.

(2) Filling materials shall respect Criterion 5.1. Where wool is used as filling material, Criterion 5.1, Criterion 5.2 and Criterion 5.8 shall be respected.

(3) All textiles that have been awarded the Environmental Label, as in accordance with Environmental Label Regulation numbered 30570, are considered being automatically compliant with all sub-criteria of Criterion 5 (Criterion 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7, 5.8, 5.10 and 5.11). Nevertheless, in order to allow mattresses to be awarded the Environmental Label, it shall be demonstrated that also Criterion 5.9 is satisfied for the mattress cover.

Criterion 5.1 General Requirements on Hazardous Substances (Including Flame Retardants, Biocides and Plasticizers) (Applicability: All textiles)

All textiles; Criteria 7 (flame retardants), Criteria 8 (biocides), Criteria 9 (plasticizers) and Criteria 10 (hazardous substances) shall be respected by all textiles.

Assessment and Verification: The applicant shall provide a declaration of compliance with this criterion, together with the supporting documentation required in the respective criterion (Criterion 7, 8, 9 and 10).

Criterion 5.2 Auxiliaries Used in Preparations and Formulations (Applicability: Covers made of any fibres and filling materials made of wool)

All covers: The following substances shall not be used in any preparations or formulations used for the production of all mattress covers. The limit values specified in the table below for the presence of Alkylphenols and Alkylphenoethoxylates (APEOs) on the cover shall be respected.

Filling materials made of wool: Alkylphenols and APEOs shall not be used in any preparations or formulations used for the production of filling materials made of wool and limit values for their presence in the filling material shall be respected.

Substance (CAS number)	Limit value (mg/kg)	Assessment and verification conditions
<i>Alkylphenols:</i> <ul style="list-style-type: none"> - Nonylphenol, mixed isomers (25154-52-3) - 4-Nonylphenol (104-40-5) - 4-Nonylphenol, branched (84852-15-3) - Octylphenol (27193-28-8) - 4-Octylphenol (1806-26-4) - 4-tert-Octylphenol (140-66-9) 	25 (total)	A
<i>Alkylphenoethoxylates (APEOs) and their derivatives</i> <ul style="list-style-type: none"> - Polyoxyethylated octyl phenol (9002-93-1) - Polyoxyethylated nonyl phenol (9016-45-9) - Polyoxyethylated p-nonyl phenol (26027-38-3) - bis(hydrogenated tallow alkyl) dimethyl ammonium chloride (DTDMAC) - distearyl dimethyl ammonium chloride (DSDMAC) - di(hardened tallow) dimethyl ammonium chloride (DHTDMAC) - ethylene diamine tetra acetate (EDTA) - diethylene triamine penta acetate (DTPA) - 4-(1,1,3,3-tetramethylbutyl)phenol - 1-Methyl-2-pyrrolidone - nitrilotriacetic acid (NTA) 	Not used	B

Assessment and Verification:

- A.** The applicant shall provide a report presenting the results of the final product testing which shall be performed through solvent extraction followed by liquid chromatography–mass spectrometry (LC-MS).
- B.** The applicant shall provide a declaration of non-use of specified chemicals from the supplier supported by safety data sheets (SDS) for all production stages.

Criterion 5.3 Surfactants, Fabric Softeners and Complexing Agents in Wet Processes (Applicability: Covers made of any fibres)

All surfactants, softeners and complexing agents: At least 95 % by weight of surfactants, softeners and complexing agents shall comply with one of the following conditions:

- (i) they shall be readily biodegradable under aerobic conditions;
- (ii) they shall be inherently biodegradable or eliminable in wastewater treatment plants.

Non-ionic and cationic surfactants: All non-ionic and cationic surfactants shall also be readily biodegradable under anaerobic conditions. The latest revision of the Detergents Ingredients Database should be used as a reference point for biodegradability:

http://ec.europa.eu/environment/ecolabel/documents/did_list/didlist_part_a_en.pdf

Assessment and Verification: the applicant shall provide appropriate documentation through safety data sheets and declarations from suppliers. For all surfactants, softeners and complexing agents, this shall be supported by results of appropriate OECD or TS EN ISO tests for:

- (i) Readily biodegradability (OECD 301 A, TS EN ISO 7827, OECD 301 B, TS EN ISO 9439, OECD 301 C, OECD 301 D, TS EN ISO 10708, OECD 301 E, OECD 301 F, TS EN ISO 9408)
- (ii) Inherently biodegradability (TS EN ISO 14593, OECD 302 A, TS EN ISO 9887, OECD 302 B, TS EN ISO 9888, OECD 302 C)
- (iii) Eliminability (OECD 303A/B, TS EN ISO 11733)

For non-ionic and cationic surfactants, this shall be supported by results of appropriate OECD or ISO tests (ISO 11734, OECD 311).

Criterion 5.4 Bleaching of Pulp, Yarn, Fabric and End Products (Applicability: Covers made of any fibres)

Chlorine agents shall not be used for the bleaching of any yarns, fabrics or end-products with the exception of manmade cellulose fibres.

Pulp used to manufacture man-made cellulose fibres (e.g. viscose) shall be bleached without the use of elemental chlorine (Cl₂). The resulting total amount of chlorine and organically-bound chlorine in the finished fibres (OX) shall not exceed 150 ppm or in the wastewater from pulp manufacturing (AOX) shall not exceed 0,170 kg/ADt pulp.

Assessment and Verification: The applicant shall provide a declaration of non-use of chlorinated bleaching agents from the supplier.

For man-made cellulose fibres, the applicant shall provide a test report showing compliance with either the OX or the AOX requirement, using the test methods listed below:

- (i) OX: TS ISO 11480 (controlled combustion and micro coulometry)
- (ii) AOX: TS EN ISO 9562

Criterion 5.5 Dyes (Applicability: Covers made of any fibres)

The following restrictions apply to dyes.

The use of dyes in textiles shall be also compliant with Criterion 10 on hazardous substances and thus the related derogation conditions shall apply. Derogation conditions relate to the handling of dyes in the dye house, the dyeing process and colour removal from wastewater from dye houses.

Group of Substances	Criterion	Assessment and verification																																																		
Halogenated carriers	Where disperse dyes are used, halogenated dyeing accelerants (carriers) shall not be used to dye polyester, acrylic or polyamide fibres and fabrics made of these fibres or polyester-wool blends (Examples of carriers include: 1,2-dichlorobenzene, 1,2,4-trichlorobenzene, chlorophenoxyethanol).	A																																																		
Azo dyes	<p>Azo dyes that may cleave to aromatic amines that are known to be carcinogenic shall not be used in acrylic, cotton, polyamide and wool fibres and fabrics made of these fibres. The limit value for the content of each arylamine in the final product shall be 30 mg/kg.</p> <table><tr><th>Arylamine</th><th>CAS number</th></tr><tr><td>4-aminodiphenyl</td><td>92-67-1</td></tr><tr><td>Benzidine</td><td>92-87-5</td></tr><tr><td>4-chloro-o-toluidine</td><td>95-69-2</td></tr><tr><td>2-naphtylamine</td><td>91-59-8</td></tr><tr><td>o-amino-azotoluene</td><td>97-56-3</td></tr><tr><td>2-amino-4-nitrotoluene</td><td>99-55-8</td></tr><tr><td>p-chloroaniline</td><td>106-47-8</td></tr><tr><td>2,4-diaminoanisol</td><td>615-05-4</td></tr><tr><td>4,4'-diaminodiphenylmethane</td><td>101-77-9</td></tr><tr><td>3,3'-dichlorobenzidine</td><td>91-94-1</td></tr><tr><td>3,3'-dimethoxybenzidine</td><td>119-90-4</td></tr><tr><td>3,3'-dimethylbenzidine</td><td>119-93-7</td></tr><tr><td>3,3'-dimethyl-4,4-diaminodiphenylmethane</td><td>838-88-0</td></tr><tr><td>p-cresidine</td><td>120-71-8</td></tr><tr><td>4,4'-methylene-bis-(2-chloroaniline)</td><td>101-14-4</td></tr><tr><td>4,4'-oxydianiline</td><td>101-80-4</td></tr><tr><td>4,4'-thiodianiline</td><td>139-65-1</td></tr><tr><td>o-toluidine</td><td>95-53-4</td></tr><tr><td>2,4- diaminotoluen</td><td>95-80-7</td></tr><tr><td>2,4,5- trimetilanilin</td><td>137-17-7</td></tr><tr><td>o- anisidin (2-Methoxyanilin)</td><td>90-04-0</td></tr><tr><td>2,4-Xylidine</td><td>95-68-1</td></tr><tr><td>2,6-Xylidine</td><td>87-62-7</td></tr><tr><td>4-aminoazobenzene</td><td>60-09-3</td></tr></table> <p>An indicative list of azodyes that may cleave to arylamines is provided in the following.</p>	Arylamine	CAS number	4-aminodiphenyl	92-67-1	Benzidine	92-87-5	4-chloro-o-toluidine	95-69-2	2-naphtylamine	91-59-8	o-amino-azotoluene	97-56-3	2-amino-4-nitrotoluene	99-55-8	p-chloroaniline	106-47-8	2,4-diaminoanisol	615-05-4	4,4'-diaminodiphenylmethane	101-77-9	3,3'-dichlorobenzidine	91-94-1	3,3'-dimethoxybenzidine	119-90-4	3,3'-dimethylbenzidine	119-93-7	3,3'-dimethyl-4,4-diaminodiphenylmethane	838-88-0	p-cresidine	120-71-8	4,4'-methylene-bis-(2-chloroaniline)	101-14-4	4,4'-oxydianiline	101-80-4	4,4'-thiodianiline	139-65-1	o-toluidine	95-53-4	2,4- diaminotoluen	95-80-7	2,4,5- trimetilanilin	137-17-7	o- anisidin (2-Methoxyanilin)	90-04-0	2,4-Xylidine	95-68-1	2,6-Xylidine	87-62-7	4-aminoazobenzene	60-09-3	B

Chrome mordant dyes	Chrome mordant dyes shall not be used in polyamide and wool fibres and fabrics made of these fibres.			A

Group of Substances	Criterion	Assessment and verification
Metal complex dyes	Metal complex dyes based on copper, chromium and nickel shall only be permitted for dyeing wool, polyamide or blends of these fibres with man-made cellulose fibres (e.g. viscose).	A

Assessment and Verification:

A. The applicant shall provide a declaration of non-use of specified dyes from the supplier supported by SDSs.

B. The applicant shall provide a report presenting the results of the final product testing. The content of azo dyes in the final product shall be tested according to TS EN 14362-1 and TS EN 14362-3. The limit value is 30 mg/kg for each arylamine. (Note: false positives may be possible with respect to the presence of 4-amino azobenzene, and confirmation is therefore recommended).

Criterion 5.6 Extractable metals (Applicability: covers made of any fibres)

The following limit values shall apply.

Metal	Limit values (mg/kg dış kılıf)	
	Covers for cot mattresses	All other products
Antimony (Sb)	30,0	30,0
Arsenic (As)	0,2	1,0
Cadmium (Cd)	0,1	0,1
Chromium (Cr):		
- Textiles dyed with metal complex dyes	1,0	2,0
- All other textiles	0,5	1,0
Cobalt (Co)		
- Textiles dyed with metal complex dyes	1,0	4,0
- All other textiles	1,0	1,0
Copper (Cu)	25,0	50,0
Lead (Pb)	0,2	1,0
Nickel (Ni):		
- Textiles dyed with metal complex dyes	1,0	1,0
- - All other textiles	0,5	1,0
Mercury (Hg)	0,02	0,02

Assessment and Verification: The applicant shall provide a report presenting the results of the final product testing as verification for the limit values. The tests shall be extraction according to TS EN ISO 105-E04 (acid sweat solution) and detection with inductively coupled plasma mass spectrometry (ICP-MS) or inductively coupled plasma optical emission spectrometry (ICP-OES, also referred to as ICP-AES).

Criterion 5.7 Water, Stain and Oil Repellents (Applicability: Covers made of any fibres)

Fluorinated water, stain and oil repellent treatment shall not be used. This shall include perfluorinated and polyfluorinated carbon treatments.

Non-fluorinated treatments shall be readily biodegradable and non-bioaccumulative in the aquatic environment including aquatic sediment. They shall additionally comply with criterion 10 on hazardous substances.

Assessment and Verification: The applicant shall provide a declaration of non-use from the supplier supported by SDSs and compliance with Criterion 10 shall be demonstrated accordingly.

Criterion 5.8 Wastewater Discharges from Wet Processing (Applicability: Covers made of any fibres and filling materials made of wool)

Wastewater discharges from wet processing (weaving, dyeing, printing and finishing processes) to the environment shall not exceed 20 g COD/kg textile processing. The requirement shall be measured downstream of on-site wastewater treatment plant or off-site wastewater treatment plant receiving wastewater from those processing sites.

If the effluent is treated on-site and discharged directly to surface waters, it shall also meet the following requirements:

- (i) pH between 6.0 and 9.0 (unless the pH of the receiving water is outside this range)
- (ii) Temperature of less than 35°C (unless the temperature of the receiving water is above this value)

If colour removal is required by a derogation condition in Criterion 10(a) then the following spectral absorption coefficients shall be met:

- (i) 436 nm (yellow sector) 7 m⁻¹
- (ii) 525 nm (red sector) 5 m⁻¹
- (iii) 620 nm (blue sector) 3 m⁻¹

Assessment and Verification: The applicant shall provide detailed documentation and test reports, using ISO 6060/TS 2789 for the determination of COD and TS EN ISO 7887 for the determination of colour, and showing compliance with this criterion on the basis of monthly averages for the six months preceding the application, together with a declaration of compliance.

The data shall demonstrate compliance by the production site or, if the effluent is treated off-site, by the wastewater treatment operator.

If the wastewater resulting from wet processes is discharged to an urban or common treatment plant or organized industry zone's wastewater treatment plant (indirect discharge), it is sufficient for the applicant to submit a confirmation notification confirming the approval of the discharge process or to verify that the discharged wastewater meets the "Urban Wastewater Treatment

Regulation" dated 08.01.2006 and numbered 26047. The submitted approval notice or verification documentation must not be older than six months as of the date of application.

Criterion 5.9 Mechanical Resistance (Applicability: Covers made of any fibre)

Mattress cover shall achieve satisfactory mechanical properties, which are defined by the following testing standards.

Property	Requirement	Test method
Tear strength	Woven fabrics ≥ 15 N Nonwoven fabrics ≥ 20 N Knitted fabrics: not applicable	TS EN ISO 13937-2 (woven fabrics) TS EN ISO 9073-4 (nonwoven fabrics)
Seam slippage	Woven fabrics ≥ 16 dikış: maksimum 6 mm Nonwoven fabrics < 16 dikış: maksimum 10 mm Knitted fabrics and nonwovens: not applicable	TS EN ISO 13936-2 (under a load of 60 N for all woven fabrics)
Tensile strength	Woven fabrics ≥ 350 N Knitted fabrics and nonwovens: not applicable	TS EN ISO 13934-1

Assessment and Verification: The applicant shall provide reports describing the results of the tests performed according to TS EN ISO 13937-2 or TS EN ISO 9073-4 for tear strength, ISO 13936-2 (under a load of 60 N) for seam slippage and TS EN ISO 13934-1 for tensile strength.

Criterion 5.10 Durability of Flame Retardant Function (Applicability: Covers made of any fibre)

Removable and washable covers shall retain their functionality after 50 wash and tumble dry cycles at a minimum of 75°C. Covers that are not intended to be removed and washed shall retain their functionality after a soak test.

Assessment and Verification: The applicant shall provide reports from tests carried out according to the following standards, as appropriate:

- TS EN ISO 6330 in combination with TS EN ISO 12138 for domestic wash cycles and TS EN ISO 10528 for industrial laundry cycles in case of removable and washable covers.
- BS 5651 or equivalent in case the cover is not intended to be removed and washed.

Criterion 5.11 Dimensional Change (Applicability: Removable covers made of any fibres)

For mattress covers that are removable and washable, the dimensional changes after washing and drying at either domestic or industrial washing temperatures and conditions shall not exceed:

- Woven fabrics: ± 3 %
- Nonwoven fabrics: ± 5 %

This criterion does not apply to fabrics that are not promoted as 'washable'.

Assessment and Verification: The applicant shall provide test reports referring to appropriate standards (TS EN ISO 5077 and TS EN ISO 6330). Unless the cover states otherwise, the default conditions shall be washing 3A (60°C), drying C (flat drying) and ironing according to the composition of the fabric.

CRITERION 6. Glues and adhesives

Glues containing organic solvents shall not be used. Glues and adhesives used for assembling the product shall be also compliant with Criterion 10 on hazardous substances.

Assessment and Verification: The applicant shall provide a declaration of non-use or a declaration from suppliers together with supporting documentation and compliance with Criterion 10 shall be demonstrated accordingly.

CRITERION 7. Flame retardants

The following flame retardants shall not be added intentionally to the product, any article of it and any homogeneous part of it.

Substance Name	CAS number	Acronym
Decabromodiphenylether	1163-19-5	decaBDE
Hexabromocyclododecane	25637-99-4	HBCD/HBCDD
Octabromodiphenylether	32536-52-0	octaBDE
Pentabromodiphenylether	32534-81-9	pentaBDE
Polybrominated biphenyls	59536-65-1	PBBs
Short chain chlorinated paraffins (C10-C13)	85535-84-8	SCCP
Tris-(2,3-dibromopropyl)-phosphate	126-72-7	TRIS
Tris(2-chloroethyl)phosphate	115-96-8	TCEP
Tris-(aziridinyl)-phosphin oxide	545-55-1	TEPA

The use of any flame retardant shall be compliant with criterion 10 on hazardous substances.

Assessment and Verification: The applicant shall provide and shall make suppliers to provide a declaration of nonuse confirming that the listed flame retardants have not been included in the product, any article of it, and any homogeneous part of it. A list of substances added to enhance the flame retarding properties shall be also provided, including concentrations and related H statements/R phrases, and compliance with criterion 10 shall be demonstrated accordingly.

CRITERION 8. Biocides

Criterion 8.1 Production

In case of use of any biocidal active substance in the product, only biocidal products containing approved active substances are allowed to be used within the scope of the "Biocidal Products

Regulation" published in the Official Gazette dated 31.12.2009 and numbered 27449. Criterion 10 for dangerous substances shall be complied with.

Assessment and Verification: The applicant shall provide either declaration of non-use or evidence that the use of biocides is authorized under the scope of the "Biocidal Products Regulation" published in the Official Gazette dated 31.12.2009 and numbered 27449. A list of biocidal products added to the product shall be also provided, including concentrations and related H statements/R phrases, and compliance with criterion 10 shall be demonstrated accordingly.

Criterion 8.2 Transportation

Chlorophenols (their salts and esters), polychlorinated biphenyl (PCB), organo-tin compounds (including TBT, TPhT, DBT, and DOT) and dimethyl fumarate (DMFu) shall not be used during the transportation or storage of the product, any article of it and any homogeneous part of it.

Assessment and Verification: The applicant shall provide and shall make suppliers to provide a declaration of non-use, as appropriate, confirming that the listed substances have not been used during the transportation or storage of the product, any article and any homogeneous part of it. A list of biocidal products added to the product shall be also provided, including concentrations and related H statements/R phrases, and compliance with Criterion 10 shall be demonstrated accordingly.

CRITERION 9. Plasticizers

The following plasticizers shall not be added intentionally to the product, any article of it and to any homogeneous part of it.

Substance/Group of Substances	CAS number	Acronym
Di-iso-nonylphthalate (*)	28553-12-0; 68515-48-0	DINP
Di-n-octylphthalate	117-84-0	DNOP
Di(2-ethylhexyl)-phthalate	117-81-7	DEHP
Diisodecylphthalate (*)	26761-40-0; 68515-49-1	DIDP
Butylbenzylphthalate	85-68-7	BBP
Dibutylphthalate	84-74-2	DBP
Di-iso-butylphthalate	84-69-5	DIBP
Di-C6-8-branched alkylphthalates	71888-89-6	DIHP
Di-C7-11-branched alkylphthalates	68515-42-4	DHNUP
Di-n-hexylphthalate	84-75-3	DHP
Di-(2-methoxyethyl)-phthalate	117-82-8	DMEP

(*) only for cot mattresses

The sum of the prohibited plasticizers shall be lower than 0,10 % by weight. The use of any plasticizer shall be compliant with Criterion 10 on hazardous substances.

Assessment and Verification: The applicant shall provide and shall make suppliers to provide a declaration of nonuse confirming that the listed substances have not been used in the product, any article of it and any homogeneous part of it. SDSs for the formulation of polymers may be requested to confirm that the listed substances have not been included in the product. A list of plasticizers added to the product shall be provided, including concentrations and related H statements/R phrases, and compliance with Criterion 10 shall be demonstrated accordingly. Additional verification for the total content of phthalates may be required in accordance with TS EN ISO 14389 when the quality of information is considered insufficient.

CRITERION 10. Excluded or Limited Substances and Mixtures

(a) Hazardous substances and mixtures

The product or any of its components must be produced in accordance with Annex-2 of the "Regulation on the Registration, Evaluation, Authorization and Restriction of Chemicals (KKDIK)" published in the Official Gazette dated 23/06/2017 and numbered 30105, or in accordance with the "Regulation on Safety Data Sheets for Hazardous Substances and Mixtures", which entered into force by being published in the Official Gazette dated 13/12/2014 and numbered 29204.

The most recent classification rules adopted by the Union shall take precedence over the listed hazard classifications and risk phrases. Applicants shall therefore ensure that any classifications are based on the most recent classification rules.

The hazard statements and the risk phrases in the table below generally refer to substances. However, if information on substances cannot be obtained, the classification rules for mixtures apply.

The restricted hazard classes are listed in the table below. The use of substances or mixtures which change their properties upon processing (e.g. become no longer bioavailable or undergo chemical modification) so that the identified hazards no longer apply are exempted from the above requirements. This shall include for instance modified polymers and monomers or additives which become covalently bonded within plastic coatings.

Acute toxicity	
Categories 1 and 2	Category 3
H300 Fatal if swallowed	H301 Toxic if swallowed
H310 Fatal in contact with skin	H311 Toxic in contact with skin
H330 Fatal if inhaled	H331 Toxic if inhaled
H304 May be fatal if swallowed and enters the airways	EUH070 Toxic by eye contact
Specific target organ toxicity	

Category 1	Category 2
H370 Causes damage to organs	H371 May cause damage to organs
H372 Causes damage to organs through prolonged or repeated exposure	H373 May cause damage to organs through prolonged or repeated exposure
Respiratory and skin sensitization	
Category 1A	Category 1B
H317 May cause allergic skin reaction.	H317 May cause allergic skin reaction
H334 May cause allergy or asthma symptoms or breathing difficulties if inhaled	H334 May cause allergy or asthma symptoms or breathing difficulties if inhaled
Carcinogenic, mutagenic, or toxic for reproduction	
Categories 1A and 1B	Category 2
H340 May cause genetic defects	H341 Suspected of causing genetic defects
H350 May cause cancer	H351 Suspected of causing cancer
H350i May cause cancer by inhalation	
H360F May damage fertility	H361d Suspected of damaging the unborn child
H360D May damage the unborn child	H361d Suspected of damaging the unborn child
H360FD May damage fertility. May damage the unborn child	H361fd Suspected of damaging fertility. Suspected of damaging the unborn child
H360Fd May damage fertility. Suspected of damaging the unborn child	H362 May cause harm to breast fed children
H360Df May damage the unborn child. Suspected of damaging fertility	
Hazardous to the aquatic environment	
Categories 1 and 2	Categories 3 and 4
H400 Very toxic to aquatic life	H412 Harmful to aquatic life with long-lasting effects
H410 Very toxic to aquatic life with long-lasting effects.	H413 May cause long-lasting effects to aquatic life
H411 Toxic to aquatic life with long-lasting effects	
Hazardous to the ozone layer	
H420 Harms public health and the environment by destroying the ozone layer in the upper atmosphere	

The substances in the table below are specifically derogated from the requirements set out in Criterion 10(a) and in accordance with the derogation conditions set out below. For each substance all derogation conditions shall be met for the specified hazard classifications.

Substances/Groups of substances	Derogated classification	Derogation conditions
Antimony Trioxide — ATO	H351	ATO shall be used as catalyst in polyester or as flame retardant synergist in textiles for backcoatings. Emissions to air in the workplace where ATO is applied shall meet an eight hour occupational exposure limit value of 0,5 mg/m ³ .
Nickel	H317, H351, H372	Nickel shall be contained in stainless steel.
Dyestuff for dyeing and non-pigment printing in textiles	H301, H311, H331, H317, H334	Dust free dye formulations or automatic dosing and dispensing of dyes shall be used by dye houses and printers to minimise worker exposure.
	H411, H412, H413	The use of reactive, direct, vat, sulphur dyes with these classifications shall meet at least one of the following

		<p>conditions:</p> <ul style="list-style-type: none"> a) High affinity dyes are used; b) Colour matching instrumentation is used; c) Standard Operating Procedures for the dyeing process are used; d) Colour removal is used in wastewater treatment (see Criterion 5.8). e) Solution dyeing processes are used; f) Digital inkjet printing processes are used; <p>The use of solution dyeing and/or digital printing are exempted from these conditions.</p>
Flame retardants used in textiles	H317 (1B), H373, H411, H412, H413	<p>The product shall be designed in order to meet fire protection requirements in ISO, EN, EU or public sector procurement standards and regulations.</p> <p>The product shall meet the requirements for durability of function (see Criterion 5.10)</p>
Optical brighteners	H411, H412, H413	Optical brighteners shall only be applied as additives during the production of acrylic, polyamide and polyester fibres.
Water, dirt and stain repellents	H413	The repellent and its degradation products shall be readily biodegradable and non-bioaccumulative in the aquatic environment, including aquatic sediment.
Auxiliaries used in textiles (comprising: Carriers, Levelling agents, Dispersing agents, Surfactants, Thickeners, Binders)	H301, H371, H373, H334, H411, H412, H413, EUH070	Recipes shall be formulated using automatic dosing systems and processes shall follow Standard Operating Procedures.
	H311, H331, H317 (1B)	Residual auxiliaries classified accordingly shall not be present at concentrations of greater than 1,0 % w/w on the final product.
Glues and adhesives	H304, H341, H362, H371, H373, H400, H410, H411, H412, H413, EUH059, EUH029, EUH031, EUH032, EUH070, H317, H334	Glue and adhesives shall respect conditions set in Criterion 6.

Assessment and Verification: The applicant shall provide the bill of materials of the product, including a list with all articles and homogeneous part of it.

The applicant shall screen the presence of substances and mixtures that may be classified with the hazard statements or risk phrases reported above in the criterion. The applicant shall provide a declaration of compliance with requirement Criterion 10(a) for the product, any article of it or any homogenous part of it.

Applicants shall select the appropriate forms of verification. The main forms of verification are foreseen as follows:

- Articles manufactured according to a specific chemical formulation (e.g. latex and PUR foams): SDSs shall be provided for the final article or for the substances and mixtures composing the final article above a cut-off limit of 0,10 % w/w.
- Homogenous parts and any associated treatments or impurities (e.g. plastic and metal parts): SDSs shall be provided for the materials composing that part of the product and for substances and mixtures used in the formulation and treatment of the materials remaining in the final part above a cut-off limit of 0,10 % w/w.
- Chemical recipes used to impart a specific function to the product or to textile components of the product (e.g. glues and adhesives, flame retardants, biocides, plasticizers, dyes): SDSs shall be provided for substances and mixtures used in the assembly of the final product or substances and mixtures applied to textile components during production, dyeing, printing and finishing processes and remaining in the textile components.

The declaration shall include at least those that can be determined from the information that meets the requirements listed in Annex-2 of KKDIK to the classification of substances, mixtures or materials with any of the hazard classes associated with the hazard statements or risk phrases referred to in the table above.

The information provided shall relate to the forms or physical states of the substances or mixtures as used in the final product.

The following technical information shall be provided to support the declaration of classification or non-classification for each substance and mixture:

- (i) For substances that have not been registered under the KKDIK Regulation or which do not yet have a harmonized SEA classification within the scope of the SEA Regulation (Regulation on Classification, Labeling and Packaging of Substances and Mixtures): Information meeting the requirements listed in Annex-7 of the KKDIK Regulation (Regulation on Registration, Evaluation, Authorization and Restriction of Chemicals);
- (ii) For substances that have been registered under the KKDIK Regulation and which do not meet the requirements for SEA classification: information confirming the unclassified status of the substance based on the KKDIK registration dossier;
- (iii) For substances that have a harmonised classification or are self-classified: SDSs where available. If these are not available or the substance is self-classified then information shall be provided relevant to the substances hazard classification according to Annex -2 to KKDIK Regulation;
- (iv) In the case of mixtures: SDSs where available. If these are not available then calculation of the mixture classification shall be provided according to the rules under SEA Regulation together with information relevant to the mixtures hazard classification according to Annex II to KKDIK Regulation.

The SDS shall be filled in accordance with the guide in Annex-2 of the KKDIK Regulation (requirements for compiling the SDS) or the Regulation on Safety Data Sheets Concerning Hazardous Substances and Mixtures. Incomplete SDS shall require supplementing with information from declarations by chemical suppliers.

Where substances used are derogated, then the declaration shall specifically identify those derogated substances and provide supporting evidence showing how the derogation conditions are met.

(b) Substances listed in accordance with Article 49 of the Regulation on Registration, Evaluation, Authorization and Restriction of Chemicals

No derogation apply for substances that are substances of high concern and are present in a bed mattress product or in any homogeneous part of the product in a concentration higher than 0.10% by weight.

Assessment and Verification: Reference to the latest list of substances of very high concern shall be made on the date of application. The applicant shall provide a declaration of compliance with Criterion 10(b), together with related documentation, including declarations of compliance signed by the material suppliers and copies of relevant SDSs for substances or mixtures in accordance with Annex -2 to KKDIK Regulation. The concentration limits shall be specified in the SDSs in accordance with Article 49 of Regulation on Registration, Evaluation, Authorization and Restriction of Chemicals.

CRITERION 11. Emission of Specified Volatile Organic Compounds (VOCs, SVOCs) from the Mattress

The contribution of mattresses to the VOC content of the indoor air shall not exceed the final values reported below, for a period of 7 days or, alternatively, 28 days.

Pollutant	Limit Value (7th day) mg/m ³	Limit Value (28th day) mg/m ³
Total VOC	<0,3	< 0,15
Formaldehyde	< 0,02	< 0,02
Other aldehydes	< 0,01	< 0,01
Semi-volatile organic compounds (SVOC)	< 0,05	< 0,025

Assessment and Verification: The applicant shall perform a test chamber analysis in accordance with the standard TS EN ISO 16000-9 (or equivalent). The analysis of formaldehyde and other aldehydes shall comply with the standard TS EN ISO 16000-3 (any equivalent); the analysis of VOCs and SVOCs shall comply with the standard TS EN ISO 16000-6 (any equivalent). Test results shall be calculated for an area-specific ventilation rate 'q' = 0,5 m³/m²h, corresponding to a

loading factor 'L' of 1 m²/m³ and an air change rate 'n' of 0,5 per hour. In all these cases, the total surface of all surfaces (upside, downside and edges) of the mattress determines the area used for the calculation of the loading factor. The test shall be performed on an entire mattress.

Should this not be possible for any reason, any of the following alternative procedures of testing may be applied:

1. Performing the test on a representative sample of the mattress (i.e. one half, one quarter or one-eighth); cut edges shall be closed airtight by appropriate means.

In order to provide a conservative estimation of the concentration values expected from the entire mattress, concentrations registered with the sample shall be scaled up by volume (i.e. emissions shall be multiplied by a factor 2, 4 or 8);

2. Performing the test for each separate element forming part of the mattress. In order to provide a conservative estimation of the concentration values expected from the entire mattress, contributions registered with single components shall be combined using this formula

$$C_M = \sum \omega_i \cdot C_i$$

where:

C_M : the overall contribution from the entire mattress (µg/m³);

C_i : the contribution per unit of mass given by each element 'i' forming part of the mattress (µg/m³. kg_i)

ω_i : the weight of the element 'i' in the entire mattress.

CRITERION 12. Technical Performance

Criterion 12.1 Quality

The product shall be produced in accordance with TS 9364 or TS 7167 or TS 13810 standards.

Assessment and Verification: The applicant shall provide the document obtained from TSE regarding its compliance with the relevant standard.

Criterion 12.2 Warranty

A list of recommendations on how to use, maintain and dispose of the mattress shall be reported in the warranty documentation. The warranty for the mattress shall be valid for a period of at least 3 years. This prescription shall not be required for cot mattresses.

Assessment and Verification: The applicant shall provide the guarantee certificate.

CRITERION 13. Design for Disassembly and Recovery of Materials

The manufacturer shall demonstrate that the mattress can be dismantled for the following purposes:

- undertaking repairs and replacements of worn-out parts,
- upgrading older or obsolete parts,
- collecting and separating parts and materials for the potential recycling of them.

Assessment and Verification: Information about the maintenance, repair and replacement centers of the bearing will be given, information will be given about the collection infrastructure of bearings that have expired, a report shall be submitted with the application detailing the dismantling of the mattress and the possible disposal and recycling of each part. For instance, the following actions could facilitate the dismantling of the mattress: preferring sewing to the application of glue; using removable covers; using single and recyclable materials for each homogeneous part (non-composite) or using recycled materials, giving information about the recycling infrastructure of the materials used.

CRITERION 14. Information Appearing on the Turkish Environmental Label

The following information shall be placed on the product along with the environmental label.

The environmental label shall be placed on the product packaging in dimensions of 3×3 cm. Under the label, document number in 6 points and "The use of the environmental label in this product has been approved by the Ministry of Environment, Urbanization and Climate Change in accordance with the Environmental Label Regulation published in the Official Gazette dated 19.10.2018 and numbered 30570 due to its environmental performance." statement shall be legible and clearly visible.

If the product is approved during the application process, it can be included in the following statements.

- 'High-quality long-lasting product'
- 'Hazardous substances restricted'
- 'Indoor air pollution reduced'
- '.....the part is recyclable'

Assessment and Verification: The applicant shall provide a copy of the product packaging showing the label along with the declaration of conformity to this criterion.

CRITERION 15. Additional Information to Consumers

The applicant shall provide the consumers with a list of recommendations, in written or visual form, on how to use the mattress, how to maintain it, and how the separate collection system at the end of its life is, where it will be delivered, how it will be recycled, how it will be disposed of.

Assessment and Verification: The applicant shall provide a declaration of compliance and visual evidence.
