KAYSERİ KIRSALINDA YÖRESEL MİMARİ PROJELER OLUŞTURULMASI AMAÇLI TİPOLOJİK ÇALIŞMALAR

1. Giriş

Bu çalışmada Kayseri kırsal alan yapılanmalarında kullanılmak üzere geliştirilecek olan plan tiplerinin nasıl bir mimari dil ile oluşturulduğu açıklanmaya çalışılacaktır. Bu kırsal mimari kimlik kavramının tanımlanması ile başlayan, çevresel ve sosyo-kültürel analizler ile mimari tespitlerin yer aldığı envanterlerin analizi sonucu mimari dilin çözümlenmesini hedefleyen bir süreçtir.

1990 sayımına göre Kayseri toplam nüfusu 943.484 olup, 604.072'si ilçe merkezlerinde 339.412 köylerde yaşamaktadır. Yüzölçümü 16.917 km2 olup, nüfus yoğunluğu 56'dır. Toplam 294 köyün ilçelere göre dağılımı:

Yahyalı : 28
Pınarbaşı : 115
Hacılar : 2
İncesu : 8
Tomarza : 46
Özvatan : 4
Felâhiye : 9
Talas : 12
Melikgazi : 1
Develi : 45
Sarız : 35
Kocasinan : 20
Bünyan : 25
Yeşilhisar : 21
Sarıoğlan : 18
Akkışla : 5

Bu köylerdeki mimari kimlikler ve plan tipolojileri analiz edilirken Akdeniz Havzası'ndaki tipolojik süreçlerin Anadolu'daki etkileri araştırılmış, ortak dilin olup olmadığının araştırılması çalışmanın başlıca hedefi olmuştur.

2. TEK EVDEN DOKUYA KONUT YERLEŞİMLERİ

Bu tür bir çözümleme, en karmaşık konut tiplerinin bile tek bir hücreden oluşan evlerden yani tek hücreli tipten gelişmiş olduğunu, tek hücreli tipin aile yaşamı için oluşturulan en ilkel mimari model olduğunu açıkça ortaya koymaktadır. Farklılaştırılmamış bir oda olarak başlayıp sonradan iç mekânının işlevlere göre şekillendirildiği ve daha sonra da art arda gelen kopyalamalarla geliştirilen bu odaya "**temel tip**" adı verilmiştir.

Tekhücreli tip genellikle, ihtiyaca bağlı olarak,15–35 m^2 arası alana sahip dörtgen bir odadan meydana gelmiştir. Odayı oluşturan duvarların düz olması, yapım tekniğinin de etkisi ile odayı sınırlayan duvarların birbirine dik olarak yapılması, tekrarlanabilme, bir araya gelebilme ve bölünebilme imkânı sağlar. Odanın iki kenarının birbirine oranı Akdeniz havzasında, 1:1, 2:3 ve 2:2.5 vb arasında değişir. Kayseri bölgesinde yapılan araştırmalarda daha önce de belirtildiği gibi temel birim olan odanın ölçüleri, farklı yerleşimlerden alınan rölövelerle (2,50x3,90), (340x4,80), (3,50x5,20), (4,15x6,60) tespit edilmiştir. Bu ölçülerdeki temel birimin kısa kenarının uzun kenarına oranı 2/3 ve 3/4 arasında değişmektedir. Temel birimin 1/1 oranlarında olan atipik örneklerine de çalışılan köylerde rastlanmıştır. Tipik oda birimi yaklaşık olarak 10-15 m^2 ölçülerindedir. Ancak iki birimin eklenerek araya bir kapı açılmasıyla bu ölçü yaklaşık 25-30 m^2 ye çıkmaktadır.

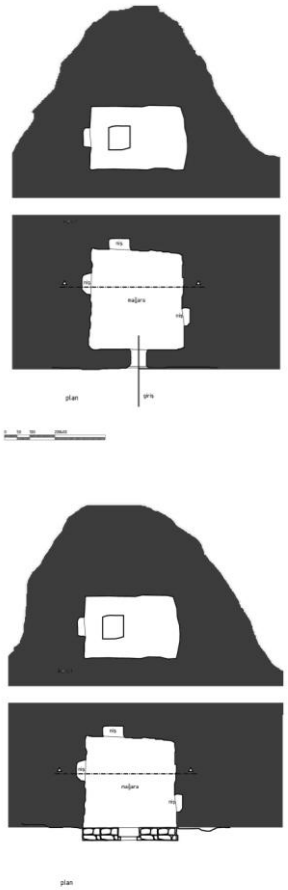

Küçük ölçülerdeki bir birimde duvar yüzeyinde açılan bir boşluk, havalandırma, aydınlatma ve giriş çıkışı sağlayan çok fonksiyonlu bir elemandır.

Kırsal kesimdeki etnografik çalışmalar ve arkeolojik kazılar, Akdeniz Bölgesi'ne özgü birçok temel tip örneği sunmaktadır. Bunlara benzer örnekler Kayseri kırsalında da kullanılmış, planların gelişimine temel oluşturmuştur. İnsan merkezli (antropik) gelişimi anlamak açısından yararlıdır.

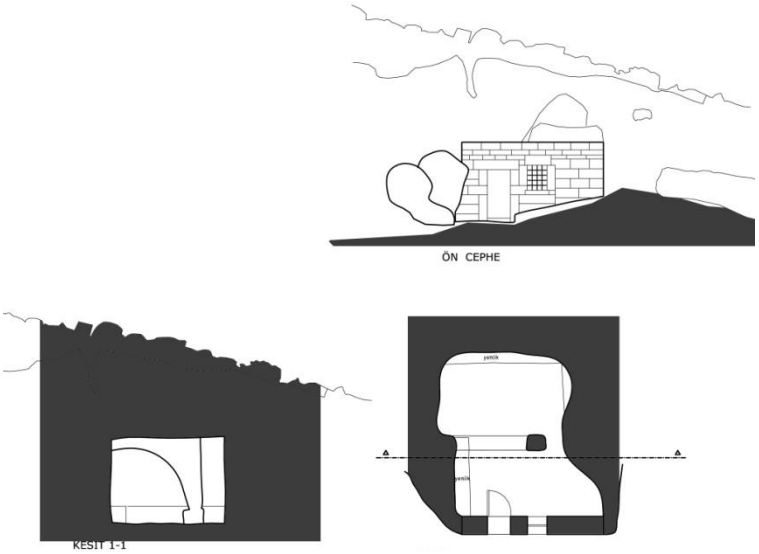

TEMEL TİP

İnsana ait tüm çabalar gibi, tekil ev sahiplerinin zor bir arazide bölüşüm sorunlarını çözmek için yarattığı eşzamanlı uygulamalar, özgünlükleriyle hayret vericidir. Görünüşte basit olan bu temel tip, yalın bir odayla başlayan uzun bir özelleşme sürecinin sonucudur. *[Resim 1.1-2-3]*

Geleneklerine ayrılmaz biçimde bağlı ve görünüşte devinimsiz olan yerleşik bir toplumda bile tip, statik değil dinamik ve etkin bir varlıktır. Temel tip, bir grubun sosyal gereksinimlerinin birincil ifadesini ya da en küçük aile biriminin fiziksel karşılığını temsil eder. Hem bir konut planı içinde bir oda hem de daha gelişmiş bir plan içinde bir aks aralığı olarak teşhis edilebilir özelliktedir.

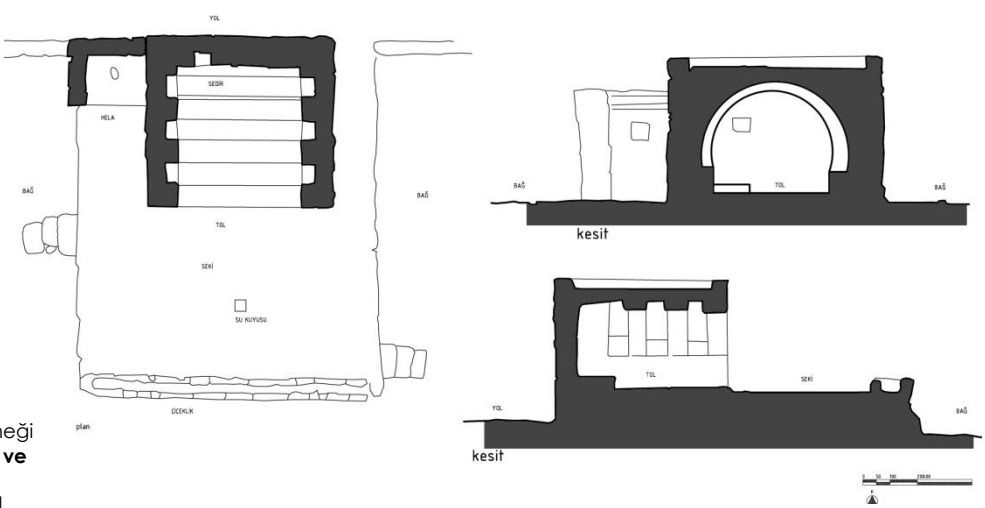

Resim 1.1:
Tek hücreli oyma sistem mekân, mağara oda.

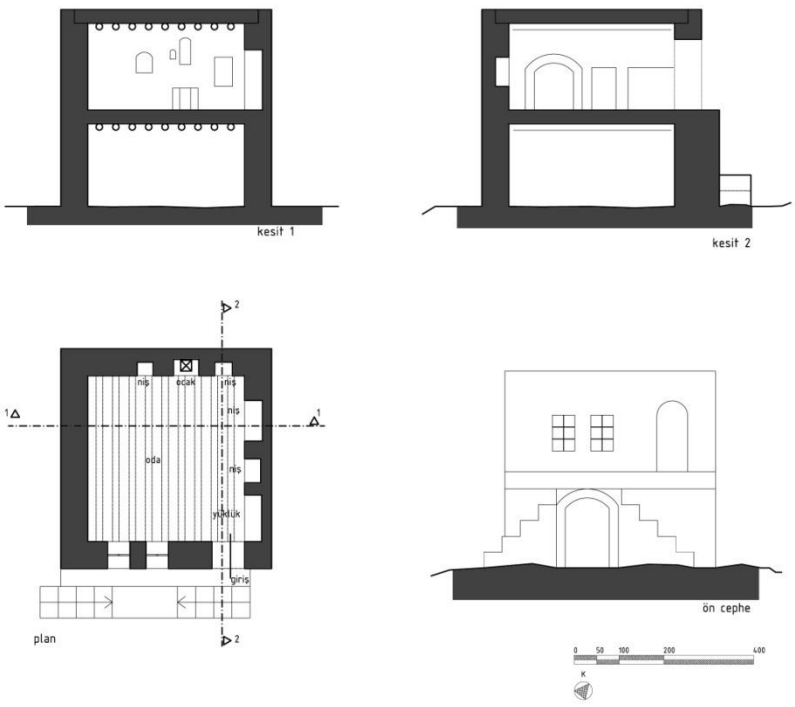

Resim1.2:
Tek hücreli açık teraslı plan örneği. Mağara konut, Bağpınar.

Tek mekânlı konuttan üst üste konmuş iki mekânlı konuta geçiş, evle ilgili artan gereksinimlere dayanmakta ve eğimde dikey biçimde yer almaktadır; işle ilgili eylemler (ahırlar, depo alanları, araç gereç barakaları) konutla ilgili eylemlerden ayrılmaktadır. Eğimli arazilerde katlar arası ulaşabilirlik doğal zemin ile sağlanmaktadır. İlk defa, sadece bir odayı aydınlatma amacı taşıyan bir pencere en çok güneş ışığı alan duvarın ortasına yerleştirilir.

Derinliği eğim boyunca iki katına çıkartmak,(her katta iki mekân) dış kapı ile ahırlar arasındaki uzaklık sorununu ortaya koyduğundan bu sorun, dik bir dış mekân merdiveniyle çözülür. *[Resim 1.4]*

Resim1.3:
Tek hücreli – açık teraslı plan örneği [İncesakal, Mustafa. **Doğa, İklim ve Malzemeye Duyarlı bir Mekan Örneği 'Tol'**, TOL 2003 Kış, s.91-94]

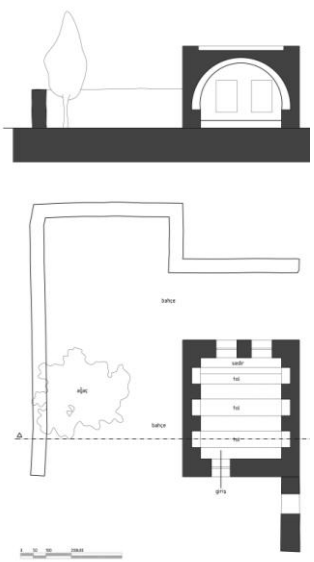

Resim1.4:
Temel tip dıştan merdivenli plan örneği. Kayseri Taşhan Köyü.

AVLULU EV

Tek ev yapılanma düzeninde temel tip ihtiyaçlara cevap veremediğinde yakın bir yere yeni bir ilave daha yapılmaktadır. Bu tip yerleşmelerde parsel kavramı (mülkiyet sınırları) belirsizdir. Ancak yerleşme alanının sınırlı olması durumlarda büyümenin devam etmesi çeperlerin ve avluların belirginleşmesine neden olmaktadır. Zaman içinde doğaçlama olarak yapılmış, geometrik kuralı olmayan, son derece organik hücrelerin bir araya geldiği yerleşme dokuları ortaya çıkmaktadır.

Bir parsel içinde Konutun gelişiminde; Zaman içinde aile bireylerinin ve yaşamsal aktivitelerin artış göstermesi, temel tipin yetersiz kalması bu nedenle hücre ilaveleri yapılması süreci yaşanmaktadır. Bu büyüme sınırları takip ederek, bir avlu etrafında parsel doluncaya kadar devam etmektedir. Plan tipolojisinin gelişiminde temel tipin tekrar ederek farklı dizilim içinde bir araya gelmesi önemli rol oynamaktadır.

Avlulu evin tipolojik süreci içinde, tek hücreli bir yapının çevresinde bulunan alanın, çevreleyici duvarla ayrılması öncü olmuştur *[Resim 1.5]*. Bundan sonra, çevreleyici duvar, merkezi bir mekân çevresinde daha fazla hücrenin toplanmasıyla bir referans noktası haline gelmiştir. Seri

Resim 1.5:
Tek hücreli, bahçe duvarları ile sınırları belirlenmiş avlu.

halindeki hücrelerin yan yana dizilişinin tersine, çevrili alan, avlulu evin sonuç biçimini ortaya koyar ve içeriğini vurgulamaktadır. [Petruccioli, 2008, s.70]

Birçok kültürde bulunan avlulu evin kutsal anlamı üzerine çok şey yazılmıştır. Kapalı ve güçlendirilmiş avlulu ev, bronz çağına uzanan kültürel birçok kökenlilik ürünüdür ve Akdeniz Havzası'nda varlığını sürdürmüştür. Belki de avlulu evin yaygın varlığı Bizans kültürünün sürekliliğinde yatar; İslam dünyasında ise avlulu ev, kadınların gözden uzak tutulması ve korunması gibi İslami gereksinimleri cevaplamıştır, bir Arap evi avlusunun cennet bahçesini andırdığı söylenegelmiştir. Avlunun kırsal yerleşmelerdeki asıl amaçlarından biri de hayvancılık yapan yörelerde hayvanların kontrolü ve güvenliğidir. [Petruccioli, 2008, s.70-71]

Yolla kurulan sıkı ilişki avlulu evde sıra evdeki kadar yoğun değildir. Avlulu eve yoldan değil avludan ulaşılabilen pek çok örnek vardır. Bu nedenle, parselin herhangi bir yanı, yapının iç düzenini etkilemeden yol tarafına gelebilir. Avluda yoldan belli bir uzaklıkta yer alanı bir bina dahi görülebilir. Çevrili alan (yapılaşmamış alanın) iç ile dış arasında aracılık eder ve aynı zamanda yapının dağılımını içeriden düzenler. Yapılaşmamış alanın yapılaşmış alandan baskın olduğu örnekler çoktur. Tek bir ışık kaynağıyla, yani avludan gelen ışıkla aydınlanması, odanın derinliğini, bir topluluk tarafından kullanılan en basit hücre ölçülerine göre 6 m. ya da daha az bir ölçüyle sınırlandırır. Bina açıklığı ancak sokak tarafına bakan duvar üzerinde bir pencere yapılarak, iki katına çıkarılabilir.

Avlulu ev ile sıra ev arasında temel tipolojik farklar bulunmaktadır. Sıra ev her zaman bir yolun kenarına yerleşir, cephesi yola dönüktür ve dışarıdan içine doğrudan girilebilir. Evin açık alanı, bölge dolmaya başladığında kapatılmak üzere arkada yer alır. Bina arazisinin üstünlüğü ve ön cepheye yönlenmiş olmasından gelen yüksek mülk değeri parselin boyutlarını belirler ki bu da genelde 6 m.den az olan en basit hücre boyutuna eşittir. [Petruccioli, 2008, s.71]

Genellikle, aynı büyüklükte duvarlarla çevrili alan avlu içinde Kırsal binanın iki ana unsuru bulunur; Bunlar konut ile ahırlar, araç gereçler ve tarım aletlerinin koyulduğu mekânları kapsayan eklerdir. Çevrili alanın boyutları hiçbir biçimde yapılı alanla sınırlı değildir: Akdeniz'de ise bu durum, ön cephesi 9 ila 18 m arasında değişen Yunan pastas evinde, 12 ila 18 m arasında değişen Roma domus'unda görülebilir. Bu Kayseri kırsal yerleşmelerinde 5 ila 16 m. arasındadır. [Petruccioli, 2008, s.71]

DOKU: Yerleşimi Oluşturan Unsurlar

Konutlar, kamu yapıları, açık alanlar, meydan ve sokak örüntüleri… gibi yerleşmeyi oluşturan tüm unsurların bir araya gelmesi ile oluşan düzendir *[Resim 1.6]*. İhtiyaçlardan, yaşam biçiminden, geleneklerden kaynaklanan unsurlar belli bir dile göre dizilerek o yöreye has yerleşme dokusunu oluşturur.

Dokuyu oluşturan en önemli unsur konut ve sokak örüntüsüdür.

Resim 1.6:
Avlulu ev: Konut dokusu. Karahöyük.

Sokak:

Evlerin dizilişleri sokak karakterini oluşturur. Her yerleşmenin geleneğinde zaman içinde bu konuda bazı kurallar gelişmiştir.

Bu kurallar üç ana başlıkta tanımlanabilir;

- Sokakları sıra evler oluşturur: Bir kat, iki kat, bir-iki karışık. *[Resim 1.7]*
- Sokakları evler+bahçe duvarları oluşturur: Ev bahçe duvarı bir kat yükseklikte, bahçe duvarı bir kat, ev iki kat yükseklikte,
- Sokakları bahçe sınırları oluşturur: Duvar, tel çit, ahşap çit, bitkisel çit.

Bu kurallar genellikle merkeze yakın gelişmesini tamamlamış alanlarda daha tanımlı, merkezden uzaklaştıkça ise tanımsızlaşmaktadır.

Sokakların doğrusal oluşu evlerin planlarında dik açılı çözümler oluşmasına neden olmuştur. Bazı yerleşmelerde sokağa uzanan cumbalardan sokak perspektiflerinin algılanması sağlanmıştır.

Sokakların topografya nedeni ile eğrisel olması halinde; zemin kat planlarında irrasyonel çözümlere rastlanmaktadır. Ancak birinci kat planlarında cumbalarla plan çözümleri rasyonelleştirilmiş, ev-sokak görsel ilişkisi kurulmuş, sokak perspektifi zenginleştirilmiştir.

Resim 1.7:
Tek ev: Farklı tipteki sıra evlerden oluşan sokak. Kayseri Bağpınar Köyü.

Meydan:

Köy meydanı kamusal binalarla sınırlanan, tüm sokakların buluştuğu, köy halkının toplandığı alandır. Genellikle dini ibadet mekânı ile tanımlanır. Köy kahvesi, muhtarlık, fırın, çamaşırlık, değirmen, okuma odası, ticaret (bakkal, yöresel ürünler vb.) gibi günlük işlevlere yönelik eylem alanlarını da barındıran köy meydanının mimari kimliği döşeme kaplaması, peyzaj, ağaç vb doğal unsurlarla birlikte kamusal yapıların bütünlüğü ile belirlenir.

Kamusal Binalar:

Köy halkının resmi işlemlerinin yapıldığı, din, sağlık, ulaşım ve eğitim gibi kamusal ihtiyaçların karşılandığı mekânlardır. Köy merkezine yakın alanlarda konumlanırlar.

3. KAYSERİ KIRSAL YERLEŞMELERİNDE ALAN ÇALIŞMALARI

Araştırma alanında yerleşim biriminden veri toplamaya yönelik olarak geliştirilen "envanter çizelgeleri" kullanılarak, yöreye özgü yapısal, çevresel ve demografik unsurlar belirlenmeye çalışılmıştır. Bu aşamada, araştırma ekibi ile yerleşim alanı sakinlerinin katıldığı ortak bilgi paylaşımına olanak sağlayan toplantılar düzenlenmiştir. Bu gruplarda farklı yaş ve sınıftan sakinlerin olmasına özen gösterilmiştir.

Verilerin değerlendirilmesi:

Envanter çizelgeleri değişken unsurları açığa çıkarmaya yardımcı olmuştur. Bu bulgular farklı ölçeklerde değerlendirilmiştir. Makro ölçekte temel belirleyici unsurlar **malzeme, topografya** ve **jeolojik yapı** olarak belirlenmiştir.

Buna göre plan tiplerinin geliştirilmesinde **malzeme kullanımı** üç veri sunmaktadır.

1. **Taş - Ahşap:** Tüm köyler *[Resim 1.8]*

Resim 1.8:
Karahöyük'te taş malzeme kullanılmış konutlar.

2. **Ahşap-Taş:** Kapuzbaşı (Toroslara yakın) *[Resim 1.9]*

[Resim 1.9]:

Kapuzbaşı Köyü.

3. **Kerpiç – Ahşap:** Pınarbaşı: Kırkgeçit, Eğrisöğüt, Sarız: Karapınar, Örtülü, Çağşak, Değirmentaş, Tomarza: Özlüce, Güzelsu, Kapıkaya, Ekinli, Göbü, Develi: Yanice, Eşelik, Kale, Eskil: Yeşilova, Yanikent… *[Resim 1.10]*

Resim 1.10:
Gebelek'de kerpiç sıva ve ahşap malzemelerin kullanıldığı ev.

Topografya: İki veri sunmaktadır.

1. **Yamaç:** Yamaç yerleşmelerinde ana yollar genellikle eğime paralel olarak oluşmaktadır. Yola göre yükselen ve alçalan olmak üzere iki farklı yerleşme karakteri tespit edilmiştir. Bu yerleşme biçiminde jeolojik yapının elverişli olması halinde yatayda oyma (mağara) mekân edilmesi imkânı vardır.(Bağpınar, Taşhan)

   Bu verilere göre plan tipi üretiminde parsellere yola göre eğimi arttığında düz eğimli, azaldığında ters eğimli araziler adı verilmiştir.

2. **Ova, plato:** Düz alanlardır. Bu yapı jeolojik yapının elverişli olduğu yerlerde düşeyde oyma (mağara) mekânlar elde edilmesine imkân verir.

Jeolojik yapı: İki veri sunmaktadır.

1. **Yığma + Mağara,**
2. **Mağara.**

Ayrıca enerji kaynakları bakımından; köylerin tümüne elektrik enerjisinin ulaştığı, ancak doğal kaynaklardan enerji üretiminin teşvik edilmesi gerektiği, bu nedenle biyogaz, güneş ve rüzgâr enerjisi gibi alternatif enerji potansiyellerinin planlamada göz önüne alınması gerektiği kabul edilmiştir.

4. PLAN TİPOLOJİLERİNİN GELİŞTİRİLMESİ

Bölgede yapılan alan çalışmaları ve araştırmalar sonucunda plan çözümlerine başlangıç olarak Bayındırlık ve İskân Bakanlığı Afet İşleri Müdürlüğünün nakledilen Soğanlı Köyü için tahsis ettiği arazilerden birisi olan Yeni Soğanlı Köyü Yerleşmesi alınmıştır. Burada müdürlükçe oluşturulan 16x15 m^2 lik parsellerde, ön ve yan bahçe mesafeleri yönetmelik koşullarına uygun olmak üzere prefabrike afet konutu uygulanmıştır.

Tek tip parsel ve tek tip bina geleneksel yerleşme dokularında rastlanmayan bir örnektir ve yöresel mimari kimliğe uygun değildir. İhtiyaçlar açısından da gerçekçi değildir. Tek tip parsel kabul edilebilir olduğunda planlama ile ilgili endişeler:

- Yöresel uygulamalarda yapılarda ihtiyaçtan kaynaklanan program farklılıkları vardır. Tek tip program ihtiyaçlar doğrultusunda değiştirilmekte, ilave inşaatlar mimari kimlik açısında kaotik ve yoz bir görünüm oluşturmaktadır. Bazı ihtiyaçlar ise karşılanamamaktadır. Şöyle sıralanabilir.

- Yöresel mimari kimlik göz ardı edilmektedir. Avlu etrafındaki yaşam geleneği yok edilmektedir.
- Yöresel malzeme kullanılmamaktadır.
- Yöresel yapım sistem ve elemanları kullanılmamaktadır.
- Enerji korunumu göz ardı edilmiştir. Gelir kaynağı sınırlı köylülerin en büyük şikâyeti ısınamamaktır.

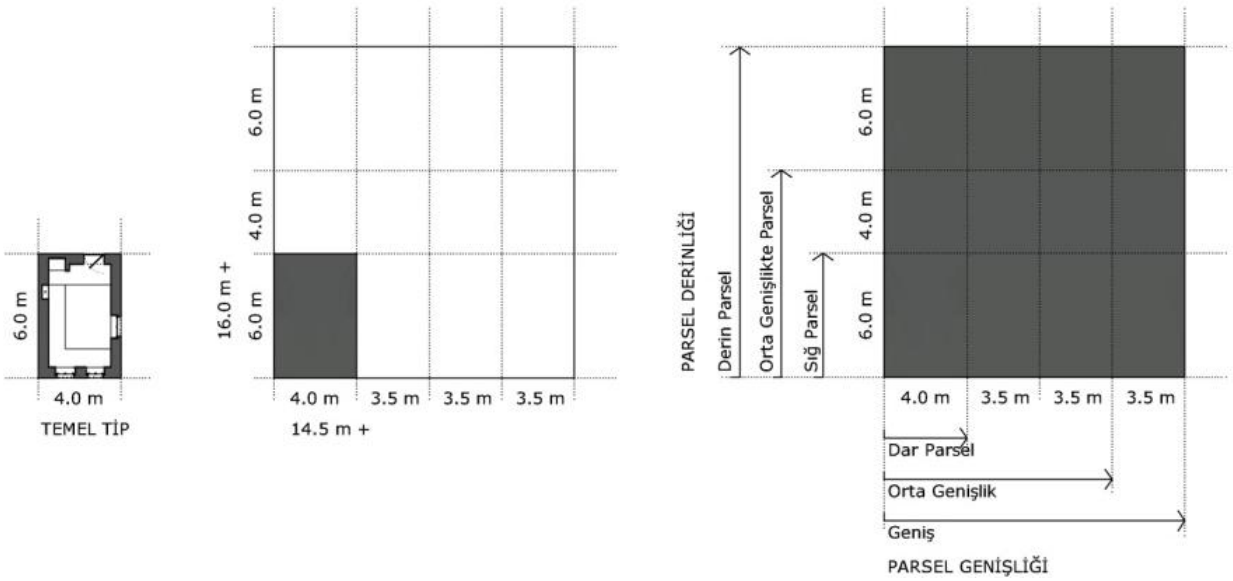

Yöresel verilere uygun olmasa da yapılan uygulamada olumlu bulunan husus ise mutfak ve tuvalet çözümleridir. Kullanıcılar bu gelişmeden mutludur.

PARSEL TİPLERİ;

Geleneksel Konut tipolojilerinde farklı parsel ölçülerine rastlanmaktadır. Parsel ölçüsü konut çözümlemesini iki farklı biçimde etkilemektedir. Parselin genişliği ve derinliği konut ve ek birimlerinin çözümlenmesini etkilemektedir. Kayseri'de yapılan alan çalışmalarında parsel boyutlarındaki farklılıklar genişlik ve derinlik olarak değerlendirilmiş ve üç grupta toplanmıştır. Parsel genişliği, parselin yol-sokak cephesindeki en geniş ölçüsüdür. *[Resim 1.11-12-13]*

Parsel genişliği:

- 4,0 m ve daha az olanlara dar parsel,
- 4,0-10,5 m arasında olan parsellere orta genişlikte,
- 10,5 m. fazla olanlar ise geniş parsel olarak tanımlanmıştır.

Resim 1.11 : Temel tip olarak belirlenen [3.0x5.0 m2] ölçülerindeki odanın plan düzleminde Kayseri için belirlenen yaklaşık [15.0x16.0 m2] ölçülerindeki parselde gelişim olanakları.

Resim 1.12 : Parsel ölçüleri ve tipoloji ilişkisi. Yapılan alan çalışmalarında elde edilen yaklaşık parsel ölçülerinin, temel birim ölçülerine göre düzenlenmesi ile elde edilen parsel ölçüleri.

Parseli tanımlayan ikinci değer ise derinliktir. Parsel derinliği, parselin yol cephesi ile arka cephesi arasındaki mesafedir. Parsel derinliğine göre de, derinliği: *[Resim 1.12]*

- 6m ve daha az olan parsellere sığ,
- 6-10 m arasında olanlara orta derinlikte,
- 10 m.den fazla olanlar ise derin parsel, olarak tanımlanmıştır.

Yerleşim dokusunun topografya ile ilişkisinin bir sonucu olarak birçok parsel irrasyonel olarak biçimlenmiştir. Bu biçimlenmelerde özellikle parsel derinlikleri, parselin kısa ve uzun kenarının ortalaması alınarak belirlenebilir.

A. Sığ Parsel:

Özellikle dik eğimli yamaçlar ve merkez nitelikli alanlarda oluşan bu parsel yapısında, ev tüm mekânları ile sokağa açılmaktadır. Dik eğimli yerleşimlerde evin arka bölümlerine genellikle oyma-mağara mekânlar eklenmiştir. Evin gelişimi de olanaklar doğrultusunda yola paralel ya da üste kat ekleyerek çözümlenmektedir.

B. Orta derinlikte parsel:

Genellikle derinlik ve genişlik ölçüleri birbirine yakın değerlerde olan parsellerdir. Avlulu çözümlenen örneklerde, avlu evin yerleşim içindeki konumuna bağlı olarak köşede ya da iç bölümde yer almaktadır. Orta derinlikli parsellerin bir bölümünde parsel alanının büyük bölümü kullanılarak merkezi iç sofalı ev plan tipinde çözümler de uygulanmıştır.

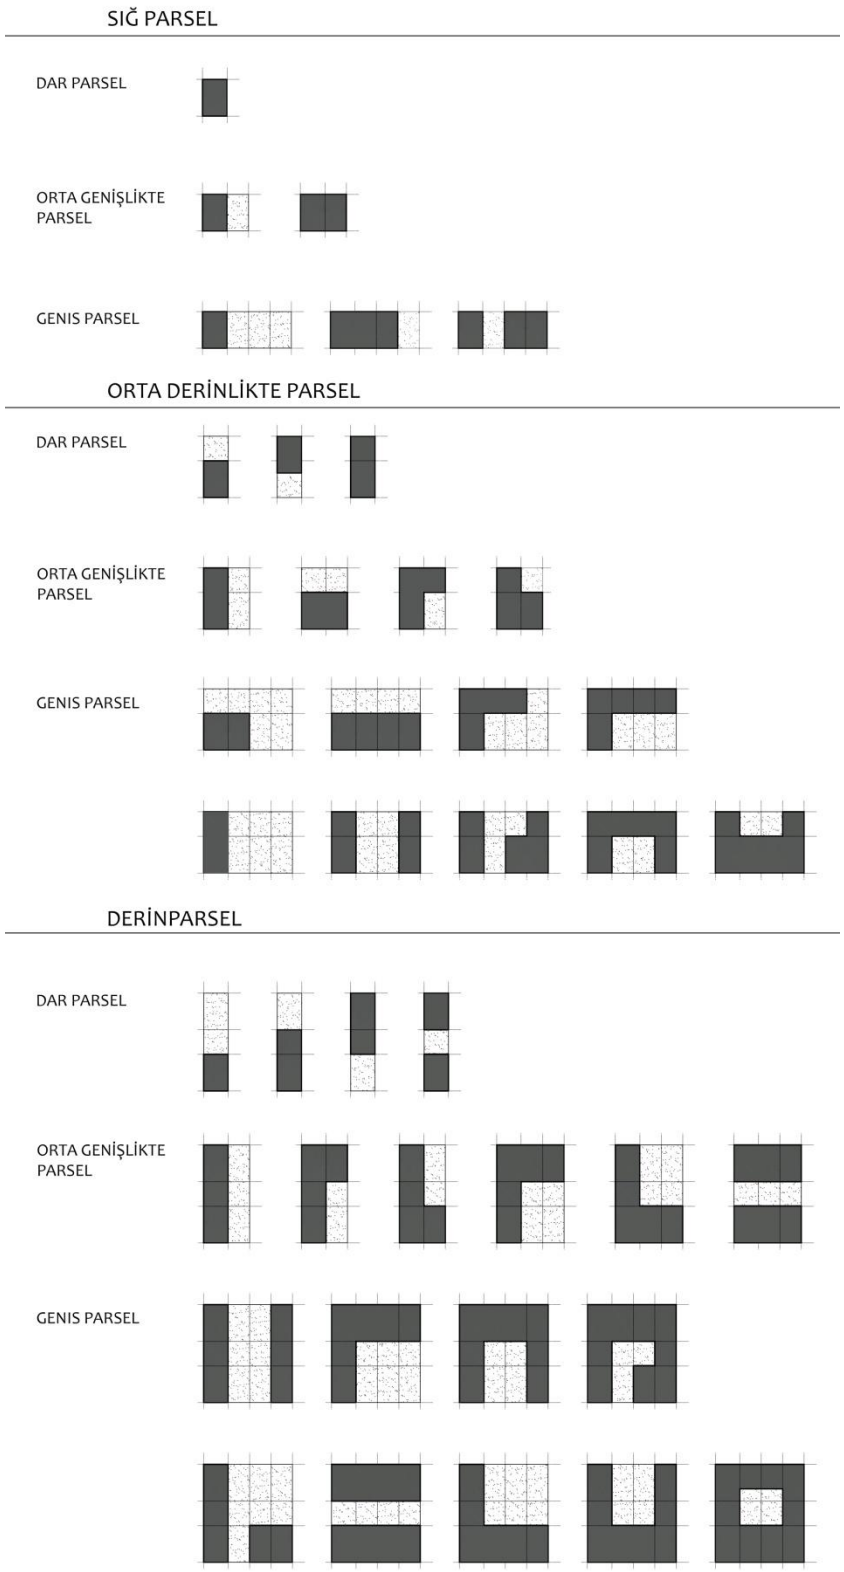

C. Derin Parsel:

Derin parsellerde, parselin genişliğine bağlı olarak yapı bir, iki ya da üç aks (modül) üzerine inşa edilmiştir. Sokak cephelerinin genişliklerine göre değerlendirilebilirler;

1. **Dar ve derin [4 m];** (Tek aks) genellikle sıra ev olarak yerleşilen parselde; avlu ya da bahçe, evin önünde, arasında ya da arkasında yer almaktadır. Yoğun dokuya sahip yerleşmelerde avlusuz plan örneklerinin de bulunduğu bu tipte avlunun arada yer aldığı örneklerde eğimli arazilerde genellikle arkada mağara mekânlar bulunmaktadır.

2. **Orta genişlikte ve derin [7.5-11 m];** (İki aks) evin odalarının ve avlunun parsel boyunca çözümlendiği örneklerdir. Evin cephesinin büyük bölümü avlu/bahçeden faydalanmaktadır.

3. **Geniş ve derin parsel [11 m+];** (üç aks) genellikle avlunun yapının arasında karnıyarık bir plan şemasına olanak tanıdığı ölçülerdedir. Plan düzeni, oda+avlu (ve/veya sofa) +oda ölçülerine bağlı olarak çözümlenmiştir. Merkez nitelikli kırsal alanlarda [oda+sofa+oda] olan plan kurgusu, merkeze uzak yerleşimlerde [oda+avlu+oda] olarak biçimlenmiş ve arada yer alan avlu evin parsel genişliğine ve avlu içinde gerçekleşen faaliyetlerine bağlı olarak ölçüsünü bulmuştur.

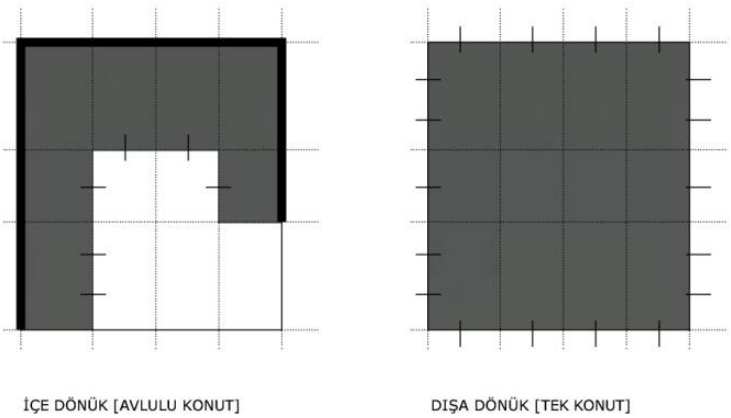

Resim 1.13:
Parsel tipolojisine göre sığ, orta derinlikte ve derin parselde konut ve gelişimi.
Parsel derinlik ve genişliği arttıkça çözüm önerileri de gelişmektedir.

5. KAYSERİ KIRSAL YERLEŞMELERİ PLAN TİPOLOJİLERİ

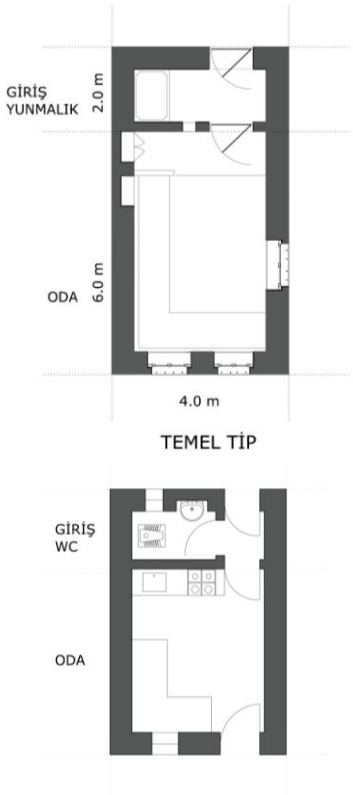

Çalışmada, 15x16 m²'lik parsel ölçülerinde, farklı ihtiyaçlara cevap verebilecek programlara sahip, temel tipten başlayarak büyüyebilen;

a. Tek ev,
b. Avlulu ev,

olmak üzere iki farklı plan tipi üzerinde çalışılmıştır *[Resim 1.14-16]*.

Resim 1.14:
Tek ev ve avlulu evin çevresel alçılımı.

Resim 1.15:
Tipik bir ön mekanı ile oda ve geliştirilmiş Tek ev: Tek mekan (temel tip).

Bu iki tip arasındaki en dikkat çekici özellik evlerin çevre ile kurduğu ilişkidedir. Tek ev, konumuna bağlı olarak, dışa dönük olarak planlanırken, avlulu ev her zaman içe dönük bir yaşam yansıtmaktadır.

a. Temel Tip (tek hücreli plan): Geleneksel tipolojiden hareket ederek boyutlar tanımlanmış, ancak çağdaş yaşam koşullarına uymak için temel tipe WC ve mutfak tezgâhı ilave edilmiştir *[Resim 1.15]*.

b. Avlulu Evler:

Temel tipten hareketle üretilen plan tiplerinde evle ilgili unsurlar (oda, misafir odası, mutfak, depo, tandır…) tek mekândan parsel tamamı doluncaya kadar bir avlu etrafında gelişerek büyüyebilir. Tipler ikinci kata da Temel tipten hareketle üreyerek zemin katın tekrarı olarak planlanmıştır *[Resim 1.17-18]*. Buna göre konut büyüdükçe;

- Kullanım mekânları artmakta,
- Avlu alanı azalmakta,
- Merdiven; sokakta, avluda, bina içinde olmak üzere değişebilmekte,
- Tek ev ve avlulu ev planlaması aynı tipoloji içinde aynı anda geliştirilebilmektedir.
- Plan tipolojileri tamamlandıktan sonra çözümlerin **dönüşüm** (uyum) adını verdiğimiz başlık altında değişik koşullara dönüşüm kabiliyeti araştırılmıştır.

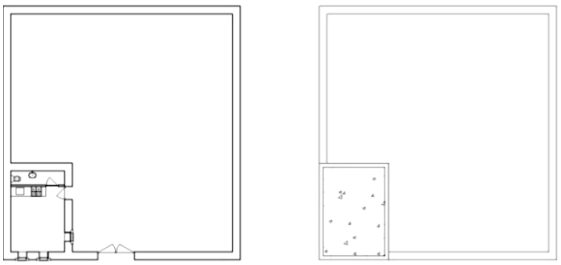

Resim 1.16: Aynı aks/modül sistemine oturan dışa dönük ve içe dönük (avlulu) ev plan tipleri arasındaki farklılıklar.

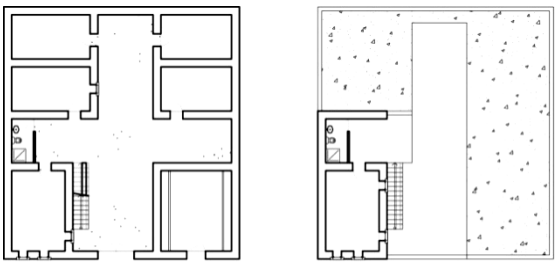

- Parsel planları irrasyonel olduğunda çözüm veren tipler geliştirilmiştir.
- Yolun irrasyonel olduğu durumlarda zemin katlar yola uyum sağlayacak, birinci katlarda cumbalarla plan geometrisi orijinal halini koruyabilecektir.

Avlulu eve geleneksel örneklerde sadece üç olası giriş seçeneği vardır. Buna daha sonraları evin içinden kullanılan merdiven tipi ilave edilmiştir.

- Birinci durumda, bina yola paralel ve bitişik olduğundan giriş bina biriminin ön cephesinden olur ve binanın dağılımsal olanaklarını kısıtlamamak için en uzak uca itilir.
- Bina yola bitişik ancak giriş avludandır ve giriş boş tarafın ortasında yer alır ve binaya avludan girilir.
- Bina yola cephe olmayıp giriş avludan yapılmaktadır.

Resim 1.17:
Avlulu ev: Tek mekanlı tip.

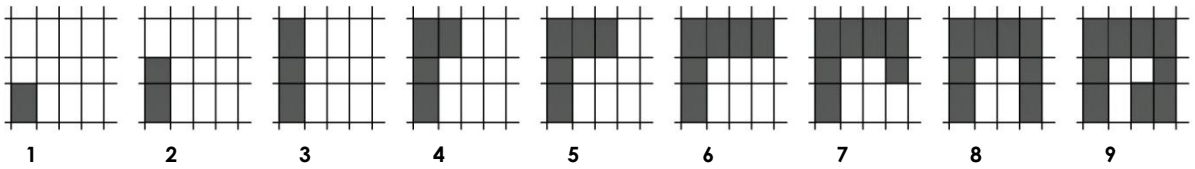

Resim 1.18:
Avlulu ev: Tek mekân (temel tip)den üretilmiş, zeminde avluyu tamamen doldurulmuş gelişmiş tip.

En basit temel tipten başlayarak avlu, alanının giderek daha büyük bölümü kapatıldığı plan çözümlerine dereceli olarak dönüşmektedir. Böylece dış mekânda gerçekleşen eylemler iç mekânda gerçekleşmeye başlar. Yeni evli çiftler ya da evin konukları için dışarıdan bağımsız girişli en az bir oda (misafir odası) daha büyük bir bina birimi oluşturmak için alındığında meydana gelir.

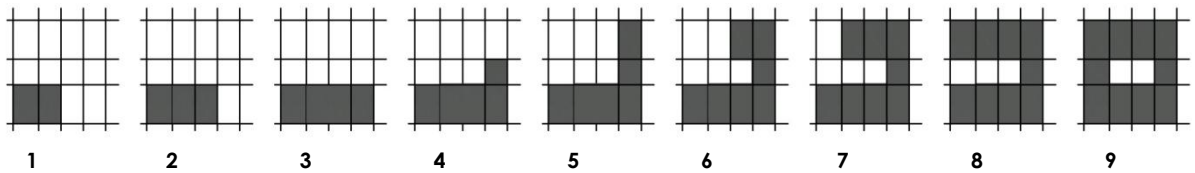

Akdeniz'de bir avlunun giderek doldurulması süreci, erken dönem konutun çok aileli konuta dönüşümüyle çakışır. Bu olgu Kayseri de çok güzel bir şekilde örneklenmiştir. Evin büyümesi, iki ya da daha fazla odanın (temel tip) bir araya gelmesiyle başlar ve avlunun tüm sınırları dolana kadar ilerler. *[Resim 1.19-1.20]*

Yöresel konut tiplerinden geliştirilen tipolojilerde konut avluya göre biçimlenmiş olsa da ayrık nizam kullanımlarda dış kabuğa pencereler

açılması mümkün olabilecektir. Bu durumda her tipin tek ev ve avlulu ev kullanımları olabilecektir.

Resim 1.19 : Avlulu evin gelişim sürecinin saat yönünde olması durumunda, evin yol ile ilişkisi oda ile birlikte bir avlu duvarı ile kurulur. Ancak konutun gelişiminin ileri evresinde (8-9) avlu duvarının yol tarafı da oda/lar ile değerlendirilmeye başlar.

Resim 1.20 : Avlulu evin gelişim sürecinin saat yönünün tersinde olması durumda ise evin gelişimi yola paralel olarak gelişir. Böylelikle parselin önce yol cephesi tamamlanır.

Tipolojik Dönüşüm

1. **Fonksiyon Dönüşümü:**
   Bir evi daha karmaşık ve özelleşmiş yapma sürecinde önemli bir adım, konutla ilgili olanlar dışındaki işlevler işin içine katılmaya başlandığında oluşur. *[Resim 1.21]*

   Ticaretin mümkün olduğu durumlarda, avlulu evin ön kısmı dükkânlara dönüşür. Bu da, evin var olan hücrelerine dışarıdan yeni ve doğrudan bir giriş yaratılarak sağlanır. Dükkân, yol kenarında bağımsız bir temel hücre gibi davrandığı bir sıra eve dönüştüğü ana kadar bağımsız biçimde gelişir: Bir merdivenin eklenmesiyle yüksekliği iki katına çıkar.

   Konutun bulunduğu çevre koşulları ve/veya konutun üretime bağlı özel ihtiyaçları nedeniyle, plan tipolojilerinde yer alan birim mekânlar değişebilirliğe olanak sağlamaktadır. Temel birimlerin birleşebilme, bölünebilme özelliklerinin yanı sıra yüzey boşluklarının farklılaşabilmesi değişen/gelişen fonksiyonları desteklemektedir.

   Konutu oluşturan bazı birimlerin üretim mekânı, atölye, ahır, pansiyon, mağaza… gibi farklı fonksiyonlara yanıt verebilecek esneklikte olması planlama içinde bir zenginlik unsuru olarak değerlendirilmelidir.

2. **Parsel Dönüşümü:** (Parsel Geometrisine uyum)
   Mülkiyet sınırları, yapı ve parsel ölçeğinde mülkiyet sınırları geometrisinin son derece irrasyonel geliştiği örnekler vardır. Bunu günümüz parsel üretme ve yapılanma mantığı ile karşılaştırmak mümkün değildir. Ev bir çekirdekten (temel tip) çoğalmaya başladığına göre, başlangıçların plansız, doğaçlama olarak büyümesi nedeniyle yapılar arasında düzensiz arakesitler yaratmaktadır.
   Bu durumda tipolojik çalışmalarda temel alınan kenarları birbirine dik parsel, arazi ve mülkiyet koşullarına bağlı olarak çoğu kez sağlanamamaktadır. Özellikle mevcut yerleşimlerde yapılacak konutlarda, parselin var olan geometrisine uymak zorunluluğu iki şekilde çözümlenmektedir;
   a. Konutun çevresinde geliştiği avlunun geometrisinin değiştirilerek mevcut parsele uyumunun sağlanması; parsel tipi irrasyonel olduğunda oda geometrileri mümkün olduğunca değiştirilmemekte, geometrik uyumsuzluk boşluklarda çözümlenmektedir. *[Resim 1.26]*
   b. Avlu geometrisinin değişmediği çözümlerde Konutu oluşturan mekânların geometrileri değiştirilerek, mevcut parsele sınırlarına uyum sağlanabilmektedir. *[Resim 1.25]*

   Ancak parsel geometrisine uyum sağlayabilmek için hem avlu hem de oda birimlerinin geometrileri değiştirilerek çözüm mümkün olabilmektedir.

   Yapılan alan çalışmalarında elde edilen veriler, genellikle avlunun biçimiyle oynanarak parsel geometrisine uyulduğu, odaların özelliklerinin korunduğunu göstermektedir.

   Plan tipolojilerinin geliştirilmesi amacıyla yapılan bu çalışma da oluşturulan planlarda, her iki çözüm de değerlendirilmiştir.

3. **Topografya Dönüşümü**: (Topografik yapıya uyum)
   Bölgenin coğrafi özellikleri ve kırsal yerleşimlerin büyük bölümünün yamaçlarda kurulu olması, topografyaya uyumlu bir planlamanın gerçekleştirilmesini zorunlu kılmaktadır. Tipolojinin geliştirilebilmesi amacıyla özel koşulların denenmediği planlama çalışmasında, elde edilen plan tipolojilerinin eğimli arazilere uyumları da incelenmiştir. Eğime oturan konutlarda, plan tiplerinin bazı birimlerinin farklı kotlarda çözümlenebilmesine olanak sağlayacak esneklikte olması, konutun arazi koşullarına uyum sağlaması açısından gereklidir. Bu çalışmada da arazi eğiminin konumu yola göre:
   - Yükseliyor ise düz eğim,
   - Alçalıyor ise ters eğim; adı verilerek

   İki durum için de dönüşüm tipolojileri geliştirilmiştir. *[Resim 1.27]*

Resim 1.21: Fonksiyon dönüşümü; konutun bir bölümünün farklı amaçlı kullanıma olanak sağlaması.

Resim 1.22: Parsel tiplerine bağlı olarak dönüşüm; sığ parselde konutun çözümlenmesi.

Resim 1.23: Parsel tiplerine bağlı olarak dönüşüm; orta derinlikte parselde konutun çözümlenmesi.

Resim 1.24: Parsel tiplerine bağlı olarak dönüşüm; derin parselde konutun çözümlenmesi.

Resim 1.25: Parsel sınırlarına bağlı olarak dönüşüm; avlu geometrisinin düzenli, odaların esnek olarak çözümlenmesi.

Resim 1.26: Parsel sınırlarına bağlı olarak dönüşüm; odalar sabit avlu geometrisinin esnek olarak çözümlenmesi.

Resim 1.27: Topografya dönüşümü; konutun arazi eğimine uygun olarak çözümlenmesi.

6. SONUÇ

Bu çalışma ile tek tip kavramının yol açtığı mimari yozlaşmaya karşı alternatif olarak, seçme özgürlüğü sunan, kültürel kimliklerin temsil edildiği, çevreye ve doğaya saygılı, yol gösterici bir model oluşturulmaya çalışılmıştır.
Kırsal alanlarda kaçak yapılanma, kimliksizleşme ve yozlaşmanın önlenebilmesi için bazı önlemler almak gerekmektedir. Bunlar bir yerleşme ölçeğinde:

- Yöresel kimliğe uygun sokak karakterinin belirlenmesi,
- Yöresel kimliğe uygun plan tipi seçimi,
- Yöresel malzeme ve yapım tekniklerinin seçimi,
- Maksimum iki kat sınırlaması,
- Avlulu tiplerde bir kat yüksekliğinde avlu duvarı,
- Dışa dönük tek ev düzeninde ortak kabul gören malzeme ile parsel sınırı,
- Bir örnek baca,
- Kabul gören endemik bir bitki türünün baskın kullanımı,
- Yol kaplaması olarak taş (Bazalt veya granit) kullanımı,

Parsellerin zemin ve birinci katlarda tamamen kullanıldığı tiplerin uygulama projeleri çizilmiştir. Böylece bu projeler birimler eksiltilerek küçük tiplerin uygulanmasına imkân vermektedir. Her türlü değişkenin (fonksiyon, parsel geometrisi, topografya) dönüşüm tipolojileri ile yeniden değerlendirilebildiği de göz önüne alındığında yüzlerce plan tipinin gelişebilmesi olağan üstü seçme özgürlüğü sunmaktadır.
Son derece zengin kültür mirasına sahip olan Kayseri'de bu zenginliğin yıkımı engellenebilecek, sürdürülebilirliği sağlanacaktır.
